

2017 HANDBOOK

67TH ANNUAL

CHICAGO PUBLIC SCHOOLS STUDENT SCIENCE FAIR, INC., PRESENTS

Connecting Global Innovations

Museum of Science and Industry, March 16 - 19, 2017
Symposium presentations, March 16, 2017

CPS Student Science Fair 2017

Frequently Asked Questions

Why participate in Science Fair?

It is a chance to learn about something you are interested in and discuss your work with professional scientists. You show your teacher you know how to 'do science' (authentic assessment) according to state and national goals for learning. Also, when you are a senior, you may qualify for scholarships for college.

When is the city science fair?

The opening ceremony and judging will be on Friday, March 17, 2017 at the Museum of Science and Industry. Other important dates are listed on the Science Fair calendar on page 101.

How do I know if I need an endorsement?

If your project could harm you, or your test subject(s), you may need an endorsement. Read pages 10 – 20 to see if the Scientific Review Committee needs to check whether the plan for your experiment is safe. If it is safe your project will receive an endorsement so you can go ahead and do the experiment. *If your project needs an endorsement and does not have one it will not be allowed to participate in Science Fair. Should an unendorsed project mistakenly progress through a school fair or Regional Fair, it will not be allowed to be exhibited at the City Science Fair.*

When are the endorsement requests due?

Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by**

October 15, 2016. Request for Use of Firearms Endorsement – **must be received by October 31, 2016.** All other endorsements **must be received by November 15, 2016,** but if you want to start your experiment sooner you should send in your request earlier so you have it before you start your experiment

How many students can work on a project?

High school students must work individually. Elementary students may work in pairs. See page 1 for more project rules.

Do I have to personally collect data for my project?

No. There is no fundamental problem with using existing data for a project. It's not better or worse than a project that involves data collection - it is just different. Data mining is particularly advisable when a student does not have the means to collect the data to their own research question, as with some aerospace projects. NASA may have collected data that a student can filter to find the information that addresses the research question. OSHA has a great deal of data that is in the public domain.

What papers do I have to turn in for the fair?

You need an entry form (p. 93), an abstract (p. 59), an image consent form (pp. 97 – 99), and any endorsements (pp. 63 - 76) necessary. Your regional fair chairperson will require a safety sheet (p. 61) when you register. The layout of required scientific papers is on pages 25 – 30. See pages 57 – 58 for a checklist.

What is APA format and how do I use it?

APA is a particular format for research papers that helps the reader identify the sources of information. See pages 31 – 34 for examples and on line tools to cite your references and format your reference list.

Can I bring my experiment materials to display at the fair?

It depends on your materials. NO microorganism cultures, glassware, chemicals, hazardous substances, fire hazards, etc. may be displayed on the table or on the display boards. See pages 35 – 37 for what is and what is not allowed at the fair.

My experiment was safe. Do I have to fill out a safety sheet?

Yes. Your statement on the safety sheet shows that you have considered all possible safety hazards. ANY potential and actual hazards must be specified as well as the safety measures you took.

How will my project be judged at the city fair?

CPS Student Science Fair and most Regional Science Fairs use the same criteria (on pages 45– 47) as at the state science fair. Use these as you develop your project as well as when you get ready for the fair.

What is the symposium and how is it different from the exhibits competition?

Symposium is an alternate way high school students may present projects. The school fair coordinator can send 30 papers from your school to be read by several science professionals, instead of the project being presented at a Regional Fair. The best papers are selected to be presented to a panel of judges once at the City Science Fair Symposium session rather than presenting several times for individual judges. See pages 39-42 for details.

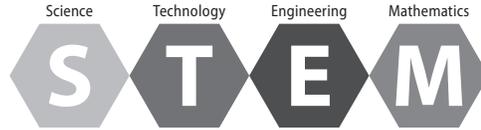

I need help! Can I get a mentor? Can I get money to pay for my experiment supplies?

Yes, see page 51 and page 83 for descriptions of our Advise-a-Student and Research Grant programs. Advise-a-Student pairs students up with scientists to talk or email about student projects. The Research Grant program reimburses students with qualified projects. Keep your receipts! Applications are on pages 79 – 82.

THE IDEA: Student thinks of a question to test for an independent science experiment and proposes idea to teacher/sponsor

Check the Science Fair Handbook to see that the project is safe for the student researcher and for the test subjects. See pages 10-22 for details about using humans as test subjects, vertebrate animals, human or vertebrate tissue, microorganisms and recombinant DNA.

If the project requires an endorsement (or multiple endorsements)

If the project does not require an endorsement

BEFORE beginning the experiment, fill out the endorsement request form and submit the request(s) to the SRC by designated due dates. (see endorsements for details). It is better to ask for permission to avoid disqualification later.

If the project is NOT safe

SRC & student discuss alternate ideas to make the project safe, student revises project plan and re-applies for endorsement

If the project IS safe

Student receives SRC endorsement and may begin experimentation

Student conducts independent science research experiment, collects and analyzes data, writes a conclusion and prepares a research summary paper.

If student wishes to exhibit at a science fair

Student prepares a display board for classroom or school science fair exhibition

If project is selected to participate in the Regional Science Fair

Student completes Entry Form for Regional and City Science Fairs, teacher/sponsor submits to Regional Science Fair Chair by December deadline (ask Regional SF Chair for specific date)

If paperwork (including applicable endorsements) is complete

Student exhibits project at Regional Science fair in January (ask Regional SF Chair for specific date)

If a top 6th grade project

Top two 6th grade project participants in each elementary Regional attend 6th grade recognition event

If a top 7th - 12th grade project

Student exhibits project at CPS Student Science Fair at the Museum of Science and Industry

If one of top 4 projects selected by judges for ISEF competition

Student exhibits at ISEF International Science Fair

If one of top 50 projects selected by judges for IJAS

Student exhibits at IJAS State Science Fair

If student wishes to present at symposium

HS student submits paper for screening by school fair coordinator

If chosen for submission to symposium committee

HS student completes the Symposium entry form, teacher/sponsor submits paper to symposium committee by January deadline

If chosen at screening by symposium committee

HS student prepares Power Point or overhead slides of his/her research for presentation to symposium judges at CPS Science Fair Symposium Presentations

If selected by CPS SSF symposium judges for IJAS competition

15 students present at IJAS symposium competition

Science Fair Project Flow Chart

Part One: Projects

Introduction

The *Science Fair Handbook* is designed to assist the student in the development of a research project, a symposium paper or an essay, in the areas of science, technology, engineering and mathematics. The information contained in this handbook should be read carefully and thoroughly by the student and the teacher. Planning and selection of a research project, the method of developing a scientific paper, and the adherence to safety requirements are explained in depth in this handbook.

If significant progress has been made on a project, the participant may exhibit his/her project at the local school science fair. If successful, the participant may move on to a Chicago Public Schools Regional Network Science Fair. From this level, the project may be chosen for exhibit at the City Chicago Public Schools Student Science Fair held at the Museum of Science and Industry.

A student researcher at the high school level may also submit a research paper for evaluation and possible presentation in the Science Fair Symposium. To participate in the Symposium, a student is not required to have an exhibit on display at the fair, but he/she must conduct primary research as a basis for the paper.

At the City Fair, a student may be selected to represent the Chicago Public Schools at the Illinois Junior Academy of Science Exposition held at Northern Illinois University in DeKalb, Illinois. The student may also be selected to represent the Chicago Public Schools at the International Science and Engineering Fair in Los Angeles, California (The flow chart on the preceding page highlights the steps followed by a student as he/she proceeds from the school level to regional, city, state and international competition.)

CPSSSF Rules and Regulations

The following rules apply to all Chicago public school students participating in the Chicago Regional Network fairs and the City Science Fair at the Museum of Science and Industry.

- Pupils in the fourth, fifth, and sixth grades are restricted in the science fair program to participation at the local and Regional Network levels. Only students in the seventh through twelfth grades attending a Chicago public school (including CPS charter schools) may participate in the City Science Fair at the Museum of Science and Industry.
- All high school projects must be done on an **individual** basis. The maximum number of 6th - 8th grade students who may work together on a project is **two**.
- The students of two projects from the sixth grade will be selected from each Regional Network science fair to attend a special event during the City Science Fair. The participants will not exhibit projects at the City Science Fair.
- All exhibitors must have physically entered and attended at least one Regional Network fair. Exhibitors will be selected by their Regional Network science fair committee before being allowed to participate in the City Science Fair.
- Students will be judged only on the most recent year's research. This project year includes research conducted over a maximum of 12 continuous months from January of last school year to May of the current school year. Any project in the same field of study from a previous year's project is considered a continuation. These projects must document that the additional research is new and different from prior work (e.g., testing a new variable or new line of investigation, etc.). Examples of unacceptable continuation are repetition of previous experimentation and increasing sample size.
- If a project needs an endorsement and does not have one it will not be allowed to participate in Science Fair. **Should an unendorsed project mistakenly progress through a school fair or Regional Network Fair, it will not be allowed to be exhibited at the City Science Fair.**

Choosing the Correct Research – Experimental vs Design

Most projects will be experimental in nature using the scientific method and will fall into the experimental category. However, if the objective of your project is to invent a new device, procedure, computer program, or algorithm, then your project may fall into the design category.

Scientific Method	Design Process
Identify and write a testable question	Define a need or real world problem
Perform background research	Perform background research
Formulate a hypothesis and identify variables	Establish design criteria
Design an experiment, establish procedure	Prepare preliminary design(s)
Test the hypothesis by conducting the experiment	Build and test a prototype
Analyze the results and draw a conclusion(s)	Test and redesign as necessary
Present results	Present results
<p>1. IDENTIFY AND WRITE A TESTABLE QUESTION</p> <p>Decide what question you want to answer or what problem you want to solve. A testable hypothesis is answered through observations or experiments that provide evidence. Be sure to have adequate technical and financial resources available to conduct your research. State your objective clearly in writing.</p>	<p>1. DEFINE A NEED</p> <p>Instead of stating a question, state a need. Can you describe in detail a problem that your design will solve? Does your research relate to a real world need?</p>
<p>2. PERFORM BACKGROUND RESEARCH</p> <p>Before you begin your project, you must become as knowledgeable as you can about your topic and about other research that has been done on that topic. You may use books, scientific literature, the Internet, or interviews with scientists or other knowledgeable people. This research not only helps you get ready to conduct your experiment, but will form the background for the Review of Literature required in your report.</p>	<p>2. PERFORM BACKGROUND RESEARCH</p> <p>For a design project, the background research may include:</p> <ul style="list-style-type: none"> • A complete description of your target user(s) • Information about the science behind your design area • Answers to research questions about user needs • Information about products that meet similar needs • Research about design criteria • What existing solutions are out there already, and how well do they solve the problem? <p>You may use books, scientific literature, the Internet, or interviews with scientists or other knowledgeable people. This research not only helps you get ready to conduct your experiment, but will form the background for the Review of Literature required in your report</p>

*See IJAS Policy and Procedure Manual at <https://sites.google.com//a/ijas.org/ijas/>

Scientific Method	Design Process
<p>3. FORMULATE A HYPOTHESIS AND IDENTIFY VARIABLES</p> <p>Based on the background research, write a statement that predicts the outcome of the experiment. Many hypotheses are stated in an “If... then” statement where the “If” statement pertains to the independent variable, and the “then” statement pertains to the dependent variable. For example: ‘If plants are grown under various colors of light, then the plants grown under the blue and red lights will show the greatest increase in biomass.’</p>	<p>3. ESTABLISH DESIGN CRITERIA</p> <p>Engineering Projects: Decide what features your design must have, for example: size, weight, cost, performance, power, etc. Perhaps include a table showing how each design criterion will be addressed by the features of the product being designed.</p> <p>Computer Science Projects: Creating or writing a new algorithm to solve a problem or improve on an existing algorithm. Discuss the criteria of the algorithm.</p> <p>Mathematics Projects: Proofs, development of a new model or explanation, concept formation or mathematical model design.</p>
<p>4. DESIGN AN EXPERIMENT, ESTABLISH A PROCEDURE</p> <p>Decide what data you need to meet your research objective and how you will collect it. Be sure to consider possible hazards in your experimental approach and decide how you can conduct your research safely. In addition, there are special rules concerning the use of human and non-human vertebrates in your research. Be sure to consult these rules before finalizing your experimental design.</p> <p>In order to obtain valid experimental results, consider the following items when designing the experiment:</p> <ul style="list-style-type: none"> • Make sure the quantity and quality of data you collect provides a reasonable assurance that your research objectives will be met. • Identify all significant variables that could affect your results. • To the best of your ability, control any significant variables not manipulated in your experiment. • Include a control or comparison group in your experimental design. <p>Be sure to establish deadlines for completing the different phases of your research. These phases might include building equipment, collecting data, analyzing the results, writing the report and constructing your display board. Remember to use metric measurements whenever possible.</p>	<p>4. PREPARE A PRELIMINARY DESIGN</p> <p>Engineering projects should have a materials list, programming and mathematical projects do not need a materials list. Projects should include a block diagram, flowchart or sketch of the design that shows all of the parts or subsystems of the design. Describe how all of the parts of the design will work together.</p>

*See IJAS Policy and Procedure Manual at <https://sites.google.com//a/ijas.org/ijas/>

Scientific Method	Design Process
<p>5. CONDUCT THE EXPERIMENT</p> <p>Follow your experimental design to collect data and make observations. Be sure to keep a log as you conduct the experiment to record your data, any problems you encounter, how you addressed them, and how these problems might have affected your data. This log will be used when you write your report.</p> <p>Keep these points in mind when conducting your experiment:</p> <ul style="list-style-type: none"> • If you get results that seem wrong or inconsistent, do not just throw them out. Try to figure out what happened. Maybe the data is correct and your hypothesis is flawed. Try to explain these “outliers” in your Data, Analysis, and Discussion section. • Don’t get discouraged when you encounter problems. Scientists often have to repeat experiments to get good, reproducible results. Sometimes you can learn more from a failure than you can from a success. 	<p>5. BUILD AND TEST A PROTOTYPE (Programs, algorithms, and mathematical models may be considered prototypes)</p> <p>When others are conducting their experiment, investigators doing an engineering, computer programming, or mathematics project should be constructing and testing a prototype of their best design. For example, you may involve targeted users in your testing to get feedback on your design; or some projects may analyze data sets.</p>
<p>6. ANALYZE THE RESULTS AND DRAW CONCLUSIONS</p> <p>Make sufficient calculations, comparisons and/or graphs to ensure the reliability and repeatability of your experiment. In what way does this analysis confirm or refute) your hypothesis. What conclusion(s) can you draw from this analysis?</p>	<p>6. REDESIGN AND RETEST</p> <p>Evidence that changes in design were made to better meet the performance criteria established at the beginning of the project. Test results may be included in tables, if applicable. Data analysis/validation may also be a part of this step.</p>
<p>7. REPORT THE RESULTS</p> <p>Your report should provide all the information necessary for someone who is unfamiliar with your project to understand what you were trying to accomplish, how you did it, and whether you succeeded. It should be detailed enough to allow someone else to duplicate your experiment exactly. Be sure to include charts and graphs to summarize your data. The report should not only talk about your successful experimental attempts, but also the problems you encountered and how you solved them. Be sure to explain what new knowledge has been gained and how it leads to further questions. For IJAS judging, you must also prepare an oral report and a display board (page 20*) to accompany the written report. Be sure to consult the IJAS policy manual, section “Writing A Scientific Research Paper,” for report guidelines . These guidelines must be followed exactly.</p>	<p>7. REPORT THE RESULTS</p> <p>Your report should provide all the information necessary for someone who is unfamiliar with your project to understand what you were trying to accomplish, how you did it, and whether you succeeded. The report should not only talk about your successful design attempts, but also the problems you encountered and how you solved them. Be sure to explain what new knowledge has been gained and how it leads to further questions. For IJAS judging, you must also prepare an oral report and a display board to accompany the written report. Be sure to consult the IJAS policy manual, section “Writing A Scientific Research Paper,” for report guidelines. These guidelines must be followed exactly.</p>

*See IJAS Policy and Procedure Manual at <https://sites.google.com//a/ijas.org/ijas/>

Project Planning and Selection

The following basic steps may help you prepare your science project. The timeline suggested is provided by the SMILE program at IIT (www.iit.edu/~smile/stimlins.html). Teachers should adjust this to meet their students' and school needs.

For more detailed help planning your project go to: www.cpsscifair.org
http://www.sciencebuddies.org/science-fair-projects/project_guide_index.shtml
or <http://sciencefair.math.iit.edu> .

▼ WEEKS 1–2: Identify your topic and establish a testable question or define a need or real world problem.

Select a topic. The following suggestions may help you choose a topic.

A: Pick something of interest to you and answer the following questions about it, listing several answers for each question.

- 1) What materials are readily available to complete your project?
- 2) How can I change the set of variables to affect the experiment or design?
- 3) How can I measure the response of these changes?
- 4) Do I have enough time to do this experiment or design process before it is due?

B: Past projects lead to new project ideas. A question you had while doing a project can lead to a new project. Alterations of previous experiments or designs are encouraged but simply repeating an old project is not.

C: Something you wondered about a science activity in class may make a great science project topic. Choose a different variable to manipulate and measure its effects.

Write a question or develop a design you can test. A testable question is a question that can be answered by experimentation and includes two parts; (1) the manipulated/independent variable = the single condition that will be changed in the experiment. (2) the responding/dependent variable = the single condition that will be measured in the experiment. Ex. How does changing the ____ (1) ____ affect ____ (2) ____?

▼ WEEKS 3–4: Research your topic, plan and prepare for your experiment or design.

Research the subject. Use books, magazines, encyclopedias, information from professionals and the internet to find background information on your topic to help you develop your hypothesis. Find information about the best way to do things and to prevent making mistakes others have made.

Write a hypothesis or develop design criteria. Predict the effect that changes in the manipulated variable will have on the responding variable. State your hypothesis or design criteria in a way you can measure and make sure it addresses your original question.

Write a step-by-step procedure. Include enough detail so someone else could follow your procedure to get the same results you get. Make sure the results are measurable and metric, that there is only one variable manipulated and all other conditions are kept the same in your experimental group. If possible include a control group in which the manipulated/independent variable is in its natural state. Perform enough trials to provide reliable results. Take necessary safety precautions. If your research question is one that you cannot personally collect data to answer, look for existing data that could answer it. “Data mining” is particularly advisable when a student does not have the means to collect the data to their own research question, as with some aerospace projects. NASA may have collected data that a student can filter to find the information that addresses the research question.

Prepare a preliminary design. Engineering projects should have a materials list, programming and mathematical projects might not require a materials list. Projects should include a block diagram, flowchart or sketch of the design that shows all of the parts or subsystems of the design. Describe how all of the parts of the design will work together.

Check to see whether your project requires an endorsement. Before you begin experimentation check the CPS Student Science Fair rules (pages 10-22) and submit the proper request for endorsement if necessary. Do not begin experimenting until your plan has been endorsed/approved by the Scientific Review Committee.

Collect all material, equipment and verify your design. Make sure you have enough materials to repeat your experiment or verify your design in case you make a mistake. Make a complete list so someone else could repeat your work.

▼ **WEEKS 5 – 6: Conduct your experiment or test your design and collect data/results.**

Conduct your experiment or test your design. Prepare a data table before starting. Follow your procedure exactly as you planned. If you change the procedure write down exactly what changes you made. Make careful, consistent and accurate measurements. Take pictures for your display if possible.

Record data and observations in a journal. This is your research document. Make sure your data is quantitative and well-organized so you can analyze it later.

▼ **WEEK 7: Analyze results and draw a conclusion.**

Analyze the results. Compile results in tables, charts and graphs that best represent the data. Determine whether the differences between your control and your experimental runs are statistically significant. Estimate the impact of experimental error. See page 23 for details on experimental or design error.

Draw a conclusion. State whether your results support or contradict your hypothesis or design criteria. State the relationship between your independent and dependent variable and/or summarize and evaluate the effectiveness of your design procedure. Summarize and evaluate the effectiveness of your procedure. Suggest improvements and/or possible new questions to study.

▼ **WEEK 8: Write your research paper and registration papers.**

Write your research summary report and abstract. (See pages 25-29 for details)

Complete other paperwork for participation in the science fair. (See pages 57-58)

▼ **WEEK 9 – 10: Prepare to present.**

Prepare your display. Organize your board to give a complete explanation of your project. Use charts, graphs, photos, illustrations, neat lettering, etc. Follow guidelines on pages 34-38.

Prepare an oral presentation. Concisely summarize your project to show what you know and have accomplished making sure you discuss relevant information. Speak fluently with good eye contact. Be polite and dynamic. Show an interest in your project.

***Get help if you need it.** If you need advice, the Advise-a-Student program pairs students with professional scientists and engineers via email or phone to discuss students' science projects at beginning, intermediate or advanced stages. If questions about your project go beyond your teacher's range of expertise fill out an Advisor Request Application to be matched with someone who can help. If you need financial help, the Research Grants program will reimburse students with qualified projects for expenses related to their experiments or designs. Students must submit an application (pages 79-82) and the original receipts.

2017 Science Fair Categories (Including new IJAS categories)

Students must design an experiment to investigate a question or problem, or design or develop a new model, computer program, mathematical proof, and so forth.

A project based solely on library research is not an acceptable project. Note that building without purposeful design and testing or demonstration is not an acceptable project. The following guidelines should give you an indication of what type of experimentation or project can be done within each category and should help to place a given project in the proper category for judging.

Projects in any of the listed IJAS categories below may need an endorsement sheet(s). Make sure that all safety rules are followed, and that all endorsements are completed and displayed.

A control group may not always be possible or necessary for all projects; a comparison among trials is appropriate and may be used instead.

- 1 Aerospace Science**** ... is the science of the study and investigation of the earth's atmosphere and outer space. In the wide sense, it would include the design, manufacture, and operation of aircraft. Some topics that fall within this division are the operation of rockets, guided missiles, anything related to space travel, operation, and/or construction of satellites, observations of airflow patterns within tunnels, and the use of navigational equipment.
FOR IJAS ONLY – ASTRONOMY** ...is the science dealing with all of the celestial bodies in the universe, including the planets and their satellites, comets and meteors, the stars and interstellar matter, the star systems known as galaxies, and clusters of galaxies. Modern astronomy is divided into several branches: astrometry, the observational study of the position and motions of these bodies; celestial mechanics, the mathematical study of their chemical composition and physical condition from spectrum analysis and the laws of physics; and cosmology, the study of the universe as a whole.
- 2 Behavioral Science*** ... is the science that studies the demeanor or deportment of humans and other animals by means of observable response and the interpretation of the same as offered by the social sciences, sociology, psychology, etc. Some topics that fall within this division are the effect of stimuli on organisms and their responses, learning, motivation, emotion, perception, thinking, individuality, personality, and adjustment.
- 3 Biochemistry*** ... is the branch of chemistry relating to the processes and physical properties of living organisms. Topics that fall within the biochemistry division are the properties and reaction of carbohydrates, lipids, proteins, enzymes, blood, urine, vitamins, hormones, poisons, and drugs. The chemistry of absorption, digestion, metabolism, respiration, and photosynthesis as organic processes also belong in this category.
- 4 Botany** ... is the division of biology that deals with plant structure, reproduction, physiology, growth, classification, and disease. Some topics included in this category are specialization in plants, functions of various plant structures, reproduction, and heredity.
- 5 Chemistry** ... is the science that deals with the structure, composition, and properties of substances and of their transformations. Some topics included in this category are the composition of various compounds, the formulation of various compounds, the study of gas laws, atomic theory, ionization theory, and the analysis of organic and inorganic products.
- 6 Computer Science **** ... includes the study and development of computer hardware, software engineering, Internet networking and communications, graphics (including human interface), simulations/virtual reality or computational science (including data structures, encryption, coding, and information theory). Topics in this category may include writing an original program and comparing it to an existing one, developing a new language and comparing it to an existing one, etc.

*Special rules apply for projects in this category. See the appropriate section of this book for clarification.

- 7 Earth Science** ... is the science concerned with the origin, structure, composition and other physical features of the earth. Some topics that fall within this division are geology (earth composition, rock formation, fossils, minerals, and fossil fuel); geography (landforms, soils, classification of streams, erosion, and sedimentation); oceanography (ocean waves, ocean currents, composition of ocean water and coastal zone management); seismology; geophysics; and meteorology.
- 8 Electronics** ... is the branch of engineering and technology that deals with the manufacture of devices such as radios, television sets, and computers that contain electron tubes, transistors, chips, or related components. Topics in this category are circuits (electrical, electric digital and analog) for communication such as radio, radar, laser, transistor, television, and integrated circuits; electricity; electric motors; solar cells and amplifiers.
- 9 Engineering** ... is concerned with the practical application of scientific knowledge in the design, construction, and operation of roads, bridges, harbors, buildings, and machinery, lighting, heating, and communication systems. Some topics in this category are stress testing of building materials, strength composition of building materials, collection of data from operating systems to compare and contrast their effectiveness.
- 10 Environmental Science** ... is the study of the protection and care of natural resources. Topics included in this category are solar energy and its uses, water purification and usage, pollution control, soil chemistry, and insecticides. Within this area is ecology, which is the study of ecological systems, and ecological population studies.
- 11 Health Science*** ... is that science concerned with the study of the human body and good health practices. Topics to be found under this category are proper diet, care of the teeth, care of the eyes, and hygiene.
- 12 Materials Science** ... is the study of materials, nonmetallic as well as metallic, and, how they can be adapted and fabricated to meet the needs of modern technology. Using the laboratory techniques and research tools of physics, chemistry, and metallurgy, science is finding new ways of using plastics, ceramics, and other nonmetals in applications formerly reserved for metals.
FOR IJAS ONLY -- CONSUMER SCIENCE*... is the study of comparisons and evaluations of manufactured or commercial products. Topics included in this category are taste tests, color preferences, quality control, and product efficiency.
- 13 Mathematics**** ... is the science dealing with the measurement, properties, and relationships of quantities as expressed in numbers or symbols whether in the abstract or in their practical connections. Some topics included under mathematics are arithmetic (use of numbers, symbols, and numerical systems); algebra (probability, theory of equations, progressions, permutations and combinations); geometry (topology, study of geometric figures, similar figures, and scale drawings); calculus; trigonometry, statistics and graphing.
- 14 Microbiology** ... is the branch of biology concerned with the study of microorganisms. Topics to be found in this category are the structure and physiology of bacteria, viruses, yeasts, fungi, and protozoa, and studies involving cells or tissues in cultures.
FOR IJAS ONLY -- CELLULAR & MOLECULAR BIOLOGY*... is the study of the organization and functioning of the individual cell; molecular genetics focusing on the structure and function of genes at a molecular level. Other topics may include the structure and function of the immune system, innate and acquired immunity, and the interaction of antigens with antibodies. Molecular biology concerns itself with understanding the interactions between the various systems of a cell, including the interrelationships of DNA, RNA and protein synthesis and learning how these interactions are regulated.

*Special rules apply for projects in this category. See the appropriate section of this book for clarification.

15 Physics

... is the science that deals with the laws governing motion, matter, and energy under conditions susceptible to precise observation as distinct from chemistry or sciences dealing with living matter. Topics found in the category of physics are hydrostatic force and pressure, gravity, Newton's Laws, relativity, kinetic theory, motion forces, work, energy, sound, light, and magnetism.

16 Zoology*

... is the science that focuses on animals with reference to their structure, functions, development, evolution, and classification. Some topics that fall within this category are structural and functional studies of vertebrates and invertebrates, physiology, reproduction, heredity, and embryology.

* **Projects in these categories may need an endorsement(s).** See the appropriate sections of this site for clarification.

** **When a control group is not possible, a comparison among trials is acceptable.**

Endorsement requests **MUST** be made **PRIOR** to experimentation in order to ensure the safety of the test subject(s) and/or the scientist. The project plans are reviewed by the Scientific Review Committee and, if safe, the endorsement is granted and the experiment may be carried out. Permission to carry out an experiment **CANNOT** be given to one that has already been completed.

Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by is October 15, 2016**

Projects which include the use of firearms and must be conducted by a police officer or ISFPR-licensed professional must submit an endorsement with all required documents for approval prior to beginning – **must be received by October 31, 2016.**

Endorsement requests must be received by November 15, 2016 and TWO copies need to be submitted.

Safety in Experimentation

The safety of the student researcher, the test subjects (in cases of humans and vertebrate animals) and of the public are of paramount concern to Chicago Public Schools Student Science Fair, Inc. Projects using humans, vertebrates or potentially hazardous biological agents (including microorganisms, recombinant DNA, and human or vertebrate tissue) raise the greatest risks. For this reason, the plans for such projects must be reviewed by a team of qualified scientists and science teachers before experimentation or design construction begins. The Scientific Review Committee (SRC) serves this purpose. Projects that violate any of the rules for use of humans, vertebrates, microorganisms, recombinant DNA, human or vertebrate tissue, or firearms will be disqualified from the CPS Student Science Fair.

The Endorsement Process

1. Plan the project, check the rules

It is the responsibility of the teacher/sponsor working with the student to evaluate the research plan for any possible risks involved in order to ensure the health and safety of the student researcher, the test subjects and the public. The rules and guidelines on the following pages guide the student's project planning to produce a safe procedure for all concerned. These guidelines also help the student decide whether the project needs to be checked and approved (or endorsed) by the SRC. Projects (including use of humans, vertebrates, microorganisms, recombinant DNA, human or vertebrate tissue and firearms) most likely require an endorsement.

2. Request an endorsement = Ask for permission

To make sure the proposed project using humans, vertebrates or potentially hazardous biological agents is safe, the SRC needs to review the project details that pertain to safety risks and precautions BEFORE the student begins the experiment or design construction. On the endorsement request form the student explains the potentially hazardous aspects of the proposed project and what precautions are in place to prevent harm. Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by SCR by October 15, 2016**. Request for Use of Firearms Endorsement with all documents- **must be received by the SRC by October 31, 2016**. All endorsement requests which do not fall under the exception rule or use firearms **must be received the SCR by November 15, 2016**. **Endorsements must be typed**. Requests can be made in two ways. The endorsement requests can be accessed online at www.cssf.org, saved, printed, scanned and sent to the indicated email, or two copies of the completed typed request for endorsement form can be sent to the SRC committee member specified on the appropriate form (pages 63 - 76 of this handbook).

3. Review of the project plan

The SRC reviews the procedures and precautions on the request form. If the project is safe, the SRC will sign and stamp the form indicating they endorse the project. With this signature, the request form then becomes the endorsement. If the project is not safe the SRC will contact the student to notify him/her of the problem and that the project is not approved to begin experimentation or design construction. At this time the student and SRC can discuss safe alternatives. The student may then submit a new request for endorsement with the necessary revisions. The SRC will send back to the teacher/sponsor via GSR one of the two endorsements. The signed and stamped (in blue) endorsement must accompany the student's Research Summary at all science fairs. The other copy will be kept in SRC records.

4. Endorsement, then experiment

When the student has the SRC's signed and stamped endorsement the student may then begin the experiment or design construction as it has been assured to be safe for the student, the test subjects and the public.

Disqualification

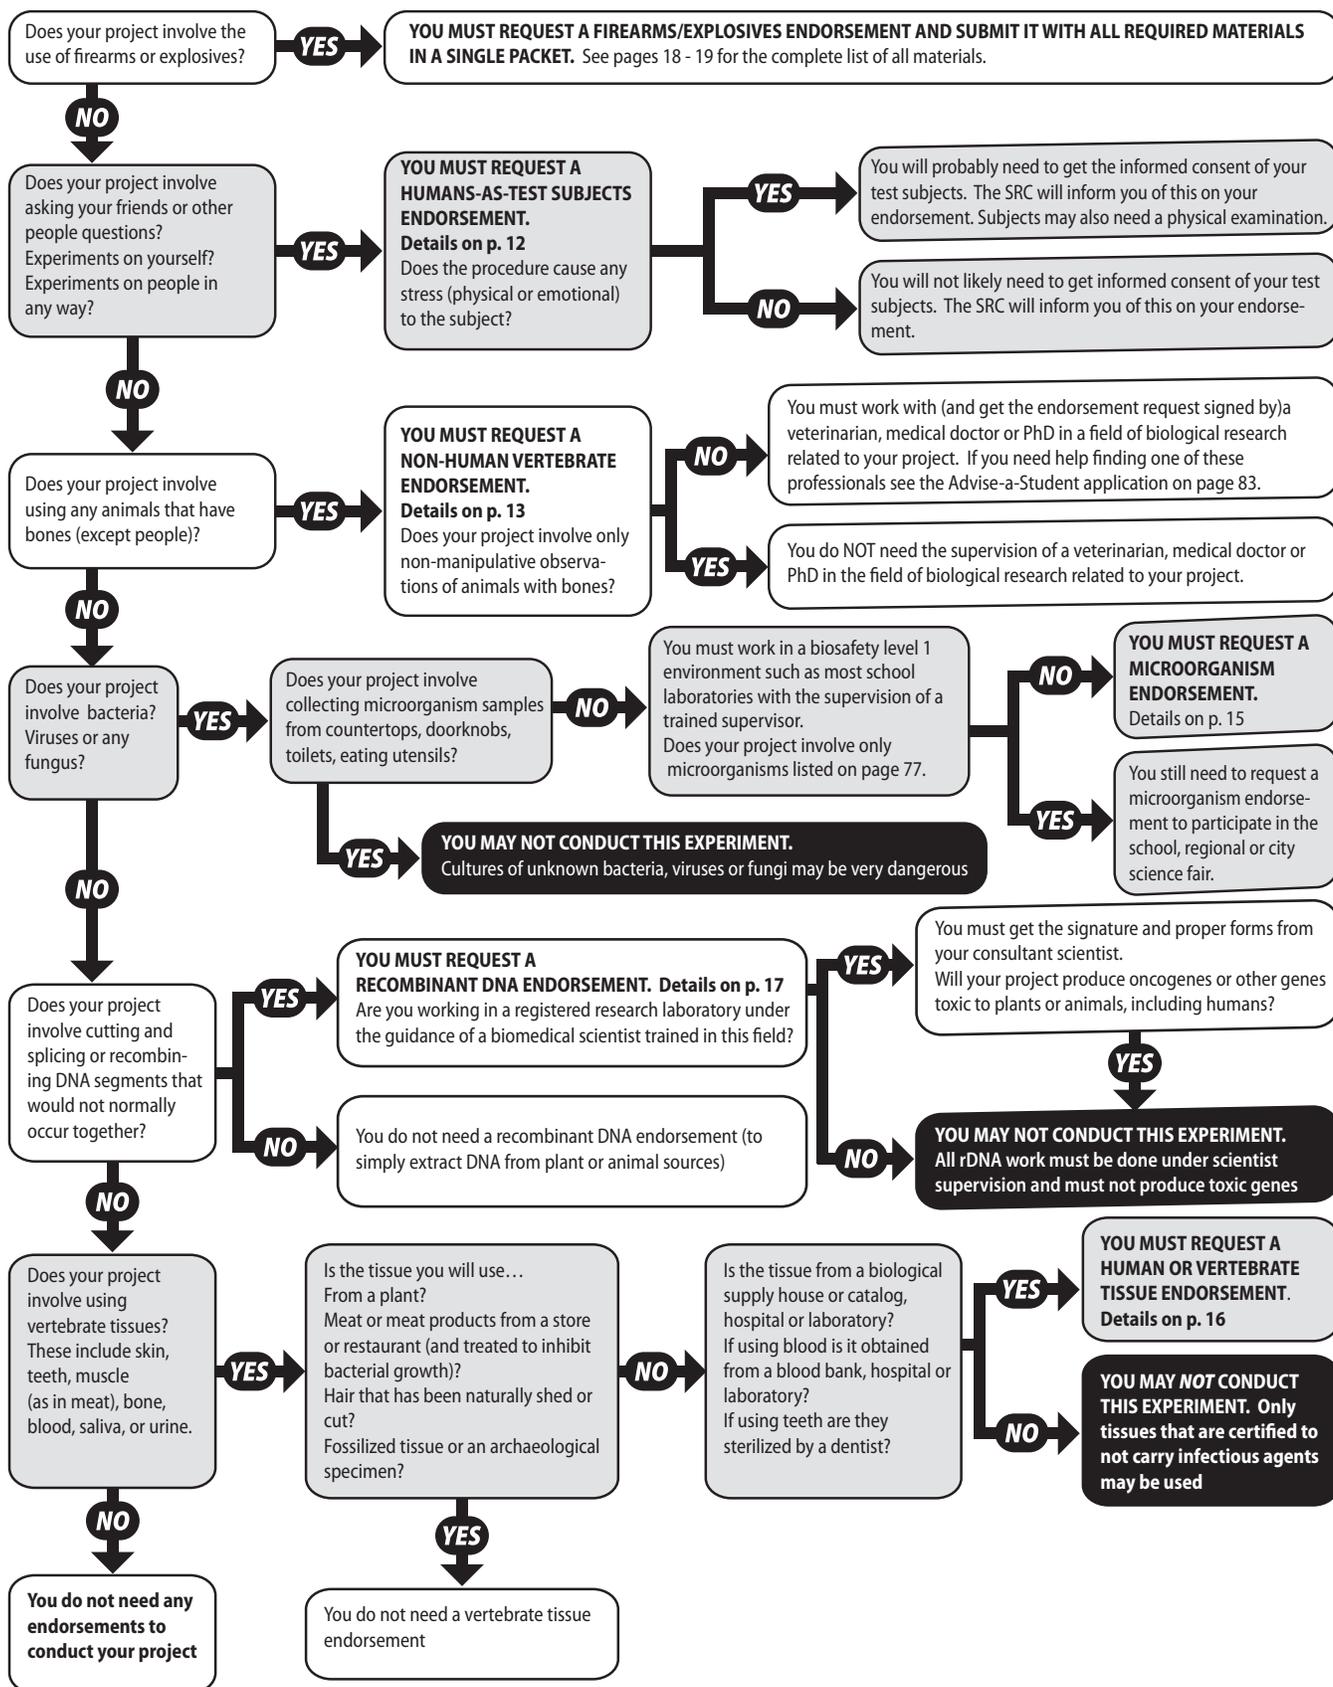

Projects that violate any of the rules for use of humans, vertebrates, microorganisms, recombinant DNA, human or vertebrate tissue, or firearms will be disqualified from the CPS Student Science Fair. The purpose of the endorsement process is to detect and resolve unsafe projects and rule violations BEFORE a student puts anyone at risk. ***If your project needs an endorsement and does not have one it will not be allowed to participate in Science Fair. Should an unendorsed project mistakenly progress through a school fair or Regional Network Fair, it will not be allowed to be exhibited at the City Science Fair.***

CPS Science Fair Endorsement Flow Chart

This flow chart does NOT include all the rules regarding requests for endorsements.

Read the following sections for complete details.

Safety of the Test Subjects - Use of Humans in Experimentation

Endorsement requirements

Rules and regulations exist to govern research that involves humans to ensure the rights and welfare of the individuals who participate as research subjects. **All human test subject projects, in which a variable is manipulated, including surveys, require a *Humans as Test Subjects Endorsement*.**

Observational research projects are strongly encouraged. Observational research projects are those in which the researcher 1) has no interaction with the individuals being observed, 2) does not manipulate the environment in any way and 3) does not record any personally identifiable data. No endorsement form is required for such projects.

Endorsement requests must be **received by the SRC by November 15, 2016**. Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by SRC by October 15, 2016**. Requests can be made in two ways. The endorsement requests can be accessed online at www.cssf.org, saved, printed, scanned and sent to the indicated email, or two copies of the completed typed request for endorsement form can be sent to the SRC committee member specified on the appropriate form (pages 63 - 76 of this handbook). If the project is safe, the SRC will sign and stamp the form indicating they endorse the project. With this signature and stamp, the request form then becomes the endorsement. This endorsement must accompany the student's Research Summary and must be displayed on board at all science fairs.

Informed Consent

In some cases, experiments that test the effect of a stressor such as exercise, loud music or personal questions about one's habits or thoughts may cause discomfort to the test subject. In such cases when the experiment causes the test subject(s) stress, discomfort or risk (physical, psychological, social, and/or legal), the student researcher must obtain the written consent of the person(s) involved. This consent means that the participant has been informed of the experimental procedure, understands the possible discomforts he/she may expect, and agrees to participate in the experiment. If the test subject is under 18 years of age, his/her legal guardian(s) must provide the informed consent, as the test subject is not of legal age to do so.

The SRC reviews all these endorsement requests to determine whether the test subjects will encounter stress. The SRC will determine whether the student researcher will need to obtain Informed Consent Certification forms from the test subjects. Notification about this will be indicated on the Humans as Test Subjects Endorsement when it is sent to the student researcher. A sample Informed Consent Certification form is found on page 65 in the Appendix. **Completed *Informed Consent Certification* forms should be kept on file with the sponsoring teacher and *not* sent to the SRC.**

Rules

1. Humans must not be subjected to treatments that are considered hazardous and/or that could result in undue stress, injury or death to the subject.
2. Projects that involve exercise and its effect on pulse, respiration rate, blood pressure, etc., of humans may be approved if a valid, normal, physical examination report of the participants being studied is on file at the school and if that exercise is not carried to the extreme. **Electrical stimulation is not permitted.** A valid, normal physical examination must be on file for each test subject. A letter from authorized school personnel, such as a school nurse, stating that all of the participating students have a physical examination on file indicating that they are physically able to participate, must be attached to the Human as Test Subjects Endorsement form.
3. Projects that involve color, texture, or any other choice are limited to preference only.
4. Quantities of food and non-alcoholic beverages are limited to normal serving amounts or less and must be consumed in a reasonable amount of time. Potential test subjects who have food allergies that may be triggered should not be tested. Normal serving amounts must be substantiated with reliable documentation, such as a food label. This documentation must be attached to the endorsement request form. No project may use over-the-counter drugs, prescription drugs, illegal drugs, or alcohol in order to measure the effect on a person.
5. **It is illegal to publish a report containing information that identifies the subject(s) directly or through identifiers linked to the subject(s) unless prior permission has been obtained.**

Additional requirements of the International Science and Engineering Fair

The ISEF requires that each high school must appoint an Institutional Review Board (IRB) to review and approve any proposed research involving human subjects. Students in grades 9 - 12 are highly encouraged to complete the appropriate ISEF approval forms. Approval forms and additional information about the use of humans as test subjects can be obtained from the International Rules for Precollege Science Research: Guidelines for Science and Engineering Fairs, available online: <http://www.societyforscience.org/isef/document>.

Safety of the Test Subjects - Use of Animals in Experimentation

The basic aims of experiments involving animals are to achieve an understanding of life processes and to further human knowledge. When students conduct research with animal subjects, the health and well-being of the animal subjects must be considered. Such experiments must be conducted with a respect for life and an appreciation of the humane considerations that must be afforded both vertebrates and invertebrates. Good experimental design involves using the least number of animals and causing the least sum total of distress to produce significant results of value to the scientific community.

It is strongly recommended that certain living organisms, such as plants, yeasts, protozoans, planaria, daphnia, rotifera, paramecia, earthworms, snails, insects, and other invertebrates, be used. The wide variety, ready availability, simplicity of care, and subsequent disposal of such organisms make them well suited for student study. Be aware, however, that there are hazards involved in using some microorganisms and that there are special rules governing their use. **See the Safety in Experimentation (p. 10) and Use of Microorganisms (p. 15) of this handbook for further information. The use of organisms listed on page 77 in the appendix require an endorsement.**

Observational research projects are those in which the researcher 1) has no interaction with the animals being observed, 2) does not manipulate the environment in any way and 3) is at no time responsible for the care of the animals involved. Observational research projects (observations of normal living patterns in unrestricted, public settings such as zoos, public parks, neighborhood trees, animal shelters, etc.) are strongly encouraged. **No endorsement form is required for such projects.**

Use of Non-Human Vertebrate Animals in Experimentation

Endorsement requirements

Rules and regulations exist to govern vertebrate animal research to protect the welfare of both the animal subjects and student researcher.

All vertebrate animal projects, in which a variable is manipulated, require a *Non-Human Vertebrate Animal Endorsement*. Endorsement requests must be **received by the SRC by November 15, 2016**. Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by the SCR by October 15, 2016**. Requests can be made in two ways. The endorsement requests can be accessed online at www.cssf.org, saved, printed, scanned and sent to the indicated email, or two copies of the completed typed request for endorsement form can be sent to the SRC committee member specified on the appropriate form (pages 63 - 76 of this handbook).

If the project is safe, the SRC will sign and stamp the form indicating they endorse the project. With this signature and stamp, the request form then becomes the endorsement. This endorsement must accompany the student's Research Summary at all science fairs. For some types of research, Illinois Junior Academy of Science (IJAS) approval will be required. The Scientific Review Committee will make this determination before issuing the vertebrate animal endorsement.

Rules

1. Animals should be obtained from a reputable, certified animal supplier.
2. To provide for humane treatment of animals, a qualified adult supervisor trained in the care and use of laboratory animals must assume primary responsibility for any vertebrate experiment. This person must hold either an M.D. degree, a Ph.D. degree in a field of biological research, or a D.V.M. degree. If the student does not have access to such a supervisor contact the Advise-a-Student Program for assistance in this regard. The Advise-a-Student Program Advisor Request Application is found on page 83 of this handbook.
3. Normal living conditions must be maintained for the animal's comfort. A clean, ventilated comfortable environment and continuous, uncontaminated water and food supply must be provided at all times, including during weekends and vacation periods. Animals must be maintained at a location approved by the Scientific Review Committee. A maze may be used for short periods of testing but the animal must be kept as specified above at all other times.
4. No experimental procedures that cause the animal pain or distinct discomfort or that interfere with its health shall be attempted on vertebrates. No changes may be made in an organism's environment that could result in undue stress, injury or death to the animal, without prior approval.
5. No intrusive or pain-producing techniques may be used. Included in intrusive techniques are surgery, injections, taking/giving blood, burning, electrical stimulation, altering a normal diet, and administering drugs or other chemical agents to measure their effect.
6. Vertebrate animals may not be killed no matter how humane the method.
7. In projects involving the incubation of bird, reptile, and amphibian embryos, the manipulated variable (experimental treatment) must be discontinued 72 hours prior to the expected hatch or birth time. Continued exposure of the manipulated variable (experimental treatment) beyond this time will result in the project being disqualified.

Additional requirements of the International Science and Engineering Fair

Students in grades 9 - 12 are highly encouraged to complete the appropriate ISEF approval forms. Approval forms and additional information can be obtained from the International Rules for Precollege Science Research: Guidelines for Science and Engineering Fairs, available online: <http://www.societyforscience.org/isef/document>.

Exceptions to Non-Human Vertebrate and Humans as Test Subjects Rules

Exceptions to the rules governing the use of nonhuman and human vertebrates will not be granted except in the circumstance that a student works with a university or research facility on a research project approved by an official review board of that institution. Approval for this exception will be granted only if the following conditions are met:

The student must seek approval for the project **before experimentation begins and must be received by November 15, 2016 of the academic year in which he/she wishes to enter the** Regional or state exposition. Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by the SCR by October 15, 2016**. Requests for approval will not be accepted after experimentation has started.

The student must have a Request for Non-Human Vertebrate Endorsement (pages 67-68) or a Request for Humans as Test Subjects Endorsement (pages 63-65) signed by the director of the research institution indicating that the project has the approval of the local Institutional Review Board (IRB) when using humans as test subjects or the Institutional Animal Care and Use Committee (IACUC) when using vertebrate animals.

Students performing an experiment and are supervised in a university lab, research facility, or professional facility must have a letter, on the organization/research facility's letterhead, from the supervisor stating that the student worked under constant supervision and that all rules and regulations were followed. This original

letter should directly follow the required endorsement form in the student's original written paper. A copy of this letter must be displayed on the front of the display board with the other endorsement sheets.

These rules will be strictly enforced at the city and state expositions. The Chicago Public Schools Student Science Fair, Inc. is a member of IJAS and ISEF, and as such agrees to follow the rules of these organizations as well as formulating its own. High school students will need to request and complete the required ISEF forms to be considered for ISEF participation. Students should keep in mind that these approvals take time, and they should allow for this waiting period.

Safety of the Student Researcher – Use of Potentially Hazardous Biological Agents

Endorsement requirements

Rules and regulations exist to govern research that involves potentially hazardous biological agents to ensure the health and well-being of the student researcher and of the public. In most cases, projects involving microorganisms, recombinant DNA or vertebrate tissue require an endorsement. Endorsement requests **must be received by the SRC by November 15, 2016**. Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by the SCR by October 15, 2016**. Requests can be made in two ways. The endorsement requests can be accessed online at www.cssf.org, saved, printed, scanned and sent to the indicated email, or two copies of the completed typed request for endorsement form can be sent to the SRC committee member specified on the appropriate form (pages 63 - 76 of this handbook). If the project is safe, the SRC will sign and stamp the form indicating they endorse the project. With this signature and stamp, the request form then becomes the endorsement. This endorsement must accompany the student's Research Summary at all science fairs.

Students in Grades 9–12 are strongly encouraged to download and complete forms required by the International Science and Engineering Fair (ISEF) prior to experimentation. Only students who have the required forms will be considered for ISEF. These forms are NOT included in this booklet. Approval forms and additional information can be obtained from the International Rules for Precollege Science Research: Guidelines for Science and Engineering Fairs, available online: <http://www.societyforscience.org/isef/document>.

Microorganisms

Bacteria and fungi spores are all around us. Some are beneficial, some have no effect and some can be quite harmful, or pathogenic. We come in contact with them every day without becoming ill. Practicing good hygiene eliminates most of those that could invade our bodies and make us sick. A healthy immune system can defeat very small numbers of pathogenic microbes before one feels symptoms of illness.

For science experiments we prefer to work with many microbes at one time (colony) so they are more easily visible and more easily manipulated. A single visible colony is tens of thousands of bacteria. This quantity of pathogenic bacteria is quite dangerous to a person if handled incorrectly. For CPS Student Science Fair projects it is imperative that students not be exposed to any pathogenic bacteria; for this reason, reason, all projects using microorganisms must be screened by the Scientific Review Committee prior to beginning the experiment.

Rules about microorganism sources

1. *No primary or secondary cultures taken from humans or other warm-blooded animals may be used. This includes, but is not limited to, those taken directly from the skin, throat, mouth, etc. or indirectly – eating utensils, doorknobs, toilets, counter tops, etc.* Microbes taken from any of these sources cannot easily be identified as pathogenic or not. Culturing large quantities (colonies) of these wild microorganisms may produce a serious hazard to the student researcher and so this is not allowed.
2. Wild cultures of fungi (limited to types of bread mold) may be used if incubated at or below room temperature.
3. Pure cultures of microorganisms known to inhabit vertebrate animals must be supplied by a reputable, certified biological supplier. Microorganisms available to schools from such sources are generally non-pathogenic when used under proper lab conditions.

4. Projects involving viruses should be done with the help of a professional and should comply with the National Institutes of Health Guidelines unless the project is limited to a kit obtained from a legitimate supply house.
5. The guidance and assistance of a science teacher should be obtained when ordering known fungi cultures from a biological supply company.
6. **All microorganisms** including the list of Microorganisms for Science Projects (page 77) **require an endorsement for participation in the CPS Student Science Fair.**

Rules about experimental practices with microorganisms

7. *Sterile technique should be learned under proper guidance of a supervisor trained in this field of research before beginning any project involving microorganisms. Sterile technique is the greatest safe-guard when working with microorganisms.* Cultures of known bacteria, while they may be considered as nonpathogenic, must be treated in such a way that no bacterial contamination of the environment around the project work area can occur.
8. *All research involving potentially hazardous biological agents must be done in an appropriate laboratory (either at school or at a research facility) with a trained supervisor under Biosafety level 1 conditions;* For a complete explanation of Biosafety level 1 go to Section IV of the Center for Disease Control's Biosafety in Microbiological and Biomedical Laboratories at: http://www.cdc.gov/biosafety/publications/bmbl5/BMML5_sect_IV.pdf .
9. Only research on *Saccharomyces cerevisiae* (Baker's Yeast) may be done in a student's home environment and these cultures must be incubated at or below room temperature.
10. Any project involving growth of mold or rotting of organic material must be done in a science classroom or professional research facility.
11. All cultures must be destroyed by methods such as autoclaving or using a suitable 10% bleach solution before disposal.
12. All proper safety methods and aseptic techniques must be adhered to during experimentation. Students must wear safety goggles, gloves and wash hands after each experiment.

For more information about the safe use of microorganisms go to: http://www.sciencebuddies.org/science-fair-projects/project_ideas/Micro_Safety.shtml

Human or Vertebrate Tissue

The use of human or vertebrate tissue poses a danger to the student researcher because these tissues may contain pathogenic strains of microorganisms. For the purpose of student research, all body fluids (including blood, saliva, & urine), bone, hair, and teeth, are considered tissues.

Rules about tissue sources

1. The following types of tissue do not need to be treated as potentially hazardous biological agents provided procedures are followed to inhibit bacterial growth: plant tissues; eggs, meat or meat products including bones obtained from food stores, restaurants, or packing houses; hair that has been naturally shed or clipped; fossilized tissue or archeological specimens.
2. Students using teeth in a research project must use only sterilized teeth. A written statement to this effect, from a dentist, must accompany the request for the tissue endorsement.
3. The only human blood that may be used is that which is purchased or obtained from a blood bank, hospital, or laboratory. No blood may be drawn by or from any person specifically for a science fair project.
4. Human tissue studies where the tissue samples can be identified with a specific person must have Institutional Review Board review and informed consent.

Rules about experimental practices

5. All tissue studies must be conducted under adult supervision. ISEF requires that all tissue studies be conducted under the supervision of a Designated Supervisor.

6. All human and vertebrate tissue should be handled as though it were potentially infectious. Universal precautions must be used to prevent contact with blood or other potentially infectious materials in human and animal tissues. Lab coats, gloves, and other appropriate protective items must be worn and the worksite maintained in a clean and sanitary condition.
7. Any tissue or instruments with the potential of containing blood borne pathogens (e.g., blood, blood products, tissues which would release blood when compressed, blood-contaminated instruments) must be incinerated or autoclaved after use in order to effectively destroy blood borne pathogens.

Recombinant DNA

The use of recombinant DNA techniques may pose a danger less to the student researcher than to the public at large. The practice of recombining genes, or inserting a foreign gene into a new host organism imbues it with new traits. These traits are sometimes unpredictable and potentially dangerous to the other organisms. Specific rules exist to prevent the release of the genes and altered organisms outside the lab.

Rules

1. All research involving recombinant DNA techniques must meet requirements of the National Institute of Health Guidelines for Research Involving Recombinant DNA Molecules. For more information about these guidelines see:
http://osp.od.nih.gov/sites/default/files/Synthetic_FAQs_April_2013.pdf
Guidelines for steps involved for approved research are in the following link:
http://www.cdc.gov/biosafety/publications/bmbl5/BMML5_appendixJ.pdf
2. The study must only be conducted in a registered research laboratory under the guidance of a biomedical scientist, approved by an appropriately constituted and registered biosafety committee to conduct such work.
3. The study must have the approval of a biomedical scientist or the laboratory's IBC when necessary.
4. Propagation of recombinants containing DNA coding for oncogenes or other human, plant or animal toxins (including viruses) are prohibited.

Safety of the Student Researcher – Use of Hazardous Equipment

Safety is the watchword when developing a science fair project. Without exception, the highest standards of safety are required. All projects should be conducted with proper adult supervision. The following are safety measures of particular importance but do not require the approval of the Scientific Review Committee before you may conduct your experiment; with the exception of conducting a demonstration or experiment using firearms or explosives, and the production of alcohol, which will require prior approval from the Scientific Review Committee and/or Safety Review Committee before you begin your project.

Chemical Hazards

Any chemical can be dangerous when used improperly. Refer to the Merck Index and/or The Handbook of Chemistry and Physics <http://www.chemnetbase.com/> to determine potential hazards of any chemicals that are to be studied. Refer to the Materials Safety Data Sheet (MSDS) for additional safety information. <http://www.flinnsci.com/msds-search.aspx>

- Students should always wear eye protection when working with any chemical.
- All chemicals must be disposed of in accordance with State and Federal Environmental Rules <http://www.epa.gov/chemfact/>
- If possible, the student should work under the supervision of a responsible chemist.

Drone Hazards

Drones may be used in a science project PROVIDED the use complies with all Federal, State and community rules, regulations and ordinances. In addition, the use of a drone for a science project may not infringe on anyone's privacy or air space.

Electrical Hazards

All electrical equipment must be constructed according to standard electrical safety codes. If there is doubt, consult with an electric shop teacher or an electrician. The city of Chicago's electrical code for public exhibits requires all electrical devices connected to the circuits within the building to be grounded using type SO three-wire conductors.

All wiring, switches, and metal parts carrying current must be completely enclosed by barriers on all sides to absolutely prevent observers from reaching into the mechanism where they might receive an electrical shock.

Doorbell push buttons must not be used to control 110 volt apparatus. Use toggle or push-button switches designed for proper load. Non-insulated switches, such as knife switches, will not be permitted. All electrical joints must be properly secured and insulated. All electrical joints must be permanent and soldered.

Federal Communications Commission (FCC) regulations are specific with regard to spark-discharge equipment. If equipment containing such devices is used, the machine must be operated so that it does not cause harmful interference to normal channels of communication.

Fire Hazards

Open flames, torches, burners, and electrical units should be used only with proper adult supervision and safety equipment. Any student working with burning materials should perform the experiment under a fume or chemical hood.

Firearms and Explosive Hazards

- A. The provisions of this section shall not apply to model rocketry, provided any demonstration or experiment involving a model rocket is supervised by a parent, guardian or teacher over 21 years of age and all local, municipal, state and federal laws are strictly adhered to at all times concerning any model pocket, rocket engine or accessory.
- B. For purposes of participating in programs sponsored by the Chicago Public Schools Student Science Fair, Inc., experiments or demonstrations involving: 1) the use of explosives of any type whatsoever (including, but not limited to black powder and gunpowder); or 2) the use of any air gun, firearm or black powder gun, is absolutely forbidden except when advance permission is obtained from the Chicago Public Schools Student Science Fair, Inc. to utilize an air gun or firearm only as stated in this paragraph below. Notwithstanding the prohibition set forth above, a student may make application to the Chicago Public Schools Student Science Fair, Inc. for advance permission to conduct a demonstration or an experiment utilizing an air gun or firearm only. The Chicago Public Schools Student Science Fair, Inc. may, at its sole discretion, deny permission if it has any concern whatsoever for safety related to the demonstration or experiment. Additionally, an experiment will be approved only if all of the following conditions are met at all times.
 1. The student may not possess, handle or utilize any air gun or firearm at any time for conducting the demonstration or experiment for a science fair project; and the student and all bystanders, if present during the demonstration or experiment, must be behind a ballistic shield and wear eye and ear protection; the student is responsible for all items listed on the Checklist of the Physical Arrangement of the Science Project Paper on pages 57 and 58 of the 2017 Science Fair Handbook.
 2. The air gun or firearm must be handled at all times and the demonstration or experiment must be directly conducted at all times by a person over 21 years of age who is certified as a police officer by the Illinois Law Enforcement Training and Standards Board or by a person himself or herself licensed as a Private Detective or Private Security Contractor and in possession of a currently valid Firearms Control Card issued by the Illinois Department of Financial and Professional Regulation ("IDFPR") (Note: a Concealed Carry License issued by the Illinois State Police SHALL NOT SUFFICE, and a Permanent Employee Record Card "PERC" issued by the IDFPR SHALL NOT SUFFICE).
 3. The police officer or IDFPR-licensed professional conducting and supervising the demonstration or experiment must provide a written statement describing the demonstration or experiment in detail, provide a copy of all of his or her credentials, and certify under the police officer's or IDFPR-licensed professional's signature that the demonstration or experiment is safe to all persons involved; and explain why and how the demonstration or experiment is safe to all persons involved to the satisfaction of Chicago Public Schools Student Science Fair, Inc.

4. The police officer or IDFPR-licensed professional supervising the demonstration or experiment must provide a Certificate of Liability Insurance in the amount of no less than \$1,000,000.00 naming the Chicago Public Schools Student Science Fair, Inc. as “ADDITIONAL INSURED”; the facility where the demonstration or experimentation will be conducted must be recognized by the Illinois State Police and will be required to provide a Certificate of Liability Insurance in the amount of \$1,000,000.00 naming the Chicago Public Schools Student Science Fair, Inc., as “ADDITIONAL INSURED”.
5. The student, parent, guardian, police or professional supervisor, and all persons present during the conduct of the demonstration or experiment must provide a release of liability for the benefit of, and in a form agreeable to, the Chicago Public Schools Student Science Fair, Inc., such form shall be provided when the student is granted permission to conduct the demonstration or experiment.
6. The demonstration or experiment must not involve the hand loading or reloading of ammunition and may not utilize any black powder or muzzle loading gun.
7. Any demonstration or experiment involving a firearm must utilize at all times commercially-loaded fixed cartridge ammunition manufactured according to SAAMI standards.
8. The air gun or firearm utilized must be commercially-manufactured and may not be older than fifty (50) years of age.
9. The demonstration or experiment shall not involve making or testing modifications or alterations to the air gun or firearm itself.
10. All local, municipal, state and federal laws and regulations must be strictly adhered to at all times.
11. No air guns, firearms or ammunition can be present at any level of science fair (school science fair, Network Regional Science Fair, City Science Fair, IJAS and ISEF).

Any advance permission issued shall be valid to conduct experiments or demonstrations for a period of thirty (30) days following approval, after which further experiments or demonstrations may not be conducted unless the advance permission is renewed or separate advance permission for a new or different demonstration or experiment is given.

Make sure your Request for Use of Firearms Endorsement application is filed as soon as possible to allow enough time for the Safety Review Committee to review and process it. No demonstrations or experiment using firearms or explosives can begin without prior approval from the Safety Review Committee.

Glassware Hazards

Care should be taken when using glassware. Broken glass should be disposed of in proper containers. Whenever possible, plastic lab ware should be substituted for glass.

Hazardous Materials

Explosive, flammable, corrosive, or highly poisonous substances should be used with proper adult supervision and safety equipment. Examples of such substances are gasoline, alcohol, lighter fluids, armed rockets, cylinders of compressed gas, aerosol cans, and automobile storage batteries containing sulfuric acid.

Laser Hazards

Any laser used in an experimental or design project must be no greater than Class 2 (visible-light continuous wave lasers under 1 mW such as red laser pointers) without special registration from the State of Illinois (see below). In general the lowest class laser possible should be used for a given project. The revised laser classification system along with associated hazards and safety precautions are reviewed at

http://en.wikipedia.org/wiki/Laser_safety. Each experiment using lasers should clearly state the safety precautions taken. Under special circumstances, where the use of such a laser is absolutely critical to the success of a project, Class 3R lasers (also labeled as Class 3A for older lasers) may be used. These lasers require written documentation

of registration from the State of Illinois and need to follow all applicable safety precautions required by the State (<http://www.illinois.gov/iema/NRS/RadSafety/Pages/Laser.aspx>). The scientific justification for using a 3R / 3A laser must be explained, and incorporation of these extra safety precautions must be written into the experimental procedures. Among other practices, we require that 3A lasers use a protective housing or barricade which, when in place, prevents human access to the beam during operation. Under no circumstances may lasers above Class 3R / 3A be used in any project.

Mechanical Hazards

Materials and construction must be durable. All parts must be firmly attached. Power-driven parts must be protected with guards.

Production of Alcohol

Under current law and regulations, you cannot conduct experiments involving distillation of alcohol at your home. As an alternative, Federal Law requires a permit for an alcohol fuel plant, or AFP. Under this type of permit, experiments with alcohol fuels can be conducted at locations properly qualified with the Bureau of Alcohol, Tobacco, Firearms, and Explosives ATF. Approval for this type of project requires the following:

- An authorized representative of your school (a teacher or other school official) must complete and forward an application form 5110.74 to the ATF to establish a small AFP at your school.
- The experiment must be conducted at your school under appropriate adult supervision
- The school official must tell ATF how long the experiment will last. They may allow for additional time in case your experiment is selected for additional competition or display at an area, or the City Science Fair.
- The school official must describe the adult supervision that will be provided. This is required because of concern about the safety of students handling hazardous materials and using distillation equipment with alcohol--even with adult supervision.

Students who produce alcohol in connection with a science fair project must obtain permission from the Scientific Review Committee (SRC) prior to beginning the investigation.

Make sure your application is filed as soon as possible to allow enough time for ATF to process it. You cannot begin the experiment until ATF issues you a permit.

Application form 5110.74 and additional information are available from the Bureau of Alcohol, Tobacco, Firearms, and Explosives, National Revenue Center, Spirits Unit A, 550 Main Street, Room 8002, Cincinnati, OH 45202-3263, 1-800-398-2282 or (513) 684-7150, natirevctr@cinc.atf.treas.gov.

A copy of your permit must be attached with your Safety Sheet on the front of your display board and with each copy of your Research Summary.

Radiation Hazards

Projects dealing with radiation from cathode rays, X-rays, or radioactive materials must present no hazard to the public or the student exhibitor.

Ultraviolet Light Sources/Radiation

Students using ultraviolet light sources must be adequately shielded from these sources. Many experiments using these sources should not be undertaken unless under the direct supervision of an adult familiar with the equipment and hazards involved. No student may work with any radioactive materials unless the work is conducted in a licensed laboratory under the direct supervision of a licensed individual.

Estimating Experimental Error

Science is all about measurement. In fact, you could define science as a system for measuring the world around you and drawing conclusions from those measurements. It is a fundamental scientific truth that no measurement is ever 100% accurate. There is always some error. When designing an experiment, it is important to understand where measurement errors are likely to occur and how to reduce them as much as possible. Measurement errors may come from the person doing the measuring, from variables, or from unidentifiable random error. In order to draw valid conclusions from measurement data, a scientist must understand how measurement error affects those conclusions.

Here's a simple example:

You are trying to determine whether two metal rods expand by different amounts when heated. You design an experiment to measure the expansion of these rods. You take three measurements and calculate the average expansion for each rod. Here is the data (in micrometers):

	M1	M2	M3	AVG
Metal Rod #1	558	542	568	556
Metal Rod #2	543	551	556	550

After looking at this data, you might be tempted to conclude that Rod #1 expands more than Rod #2. Would your conclusion change if you knew that your measurement error for the experiment was ± 5 micrometers? Let's take a look... If that error (± 5) is applied to the two averages, you would have a range instead of a single value. These ranges would be:

Metal Rod #1 Average: 556 ± 5 → Range: 551– 561
Metal Rod #2 Average: 550 ± 5 → Range: 545– 555

If you were to plot these ranges on a number line, you would see that they overlap... the “true” expansion of Rod #1 could be as low as 551 while the “true” expansion of Rod #2 could be as high as 555. In other words, you cannot conclude, based on the data you collected, that there is any difference in the expansion of the two rods. The difference that you do see in the data is due to chance, not to any real difference in the metals.

What if the measurement error for the experiment was ± 2 micrometers? The ranges would then be:

Metal Rod #1 Average: 556 ± 2 → Range: 551– 558
Metal Rod #2 Average: 550 ± 2 → Range: 545– 552

In this case, the ranges do not overlap. You can conclude with some confidence that the two metal rods do, in fact, expand differently when heated.

Here are some questions you may wish to consider when designing your science fair project:

How can I improve the precision of my data?

How can I improve the accuracy of my data?

Is there too much variability in my data?

Can I reduce my measurement error by: Collecting more data? Exercising better control of the measurement process? Exercising better control of the experimental variables?

The following websites provide more information on estimating experimental error

Correct SI Metric System Usage

SI is the symbol for the *Système International d'Unités*, the modernized version of the metric system that the USA and other nations have agreed to use. (Do not abbreviate it as S.I.)

This list is provided to point out the correct way to use the metric system and to show many of the incorrect examples of its usage that may be given on package labels and in other printed matter. These correct ways to use SI are set by the international standards that define the SI.

General Guidelines:

- The short forms for SI units (such as mm for millimeter) are called **symbols**, *not* abbreviations.
- SI symbols *never end with a period* unless they are the last word in a sentence.
 - RIGHT:** 20 mm, 10 kg
 - WRONG:** 20 mm., 10 kg.
- SI symbols should be preceded by digits and *a space must separate the digits from the symbol*.
 - RIGHT:** It was 300 mm wide. The millimeter width was given.
 - WRONG:** It was 300mm wide. The mm width was given.
- Symbols *always are written in the singular form* (even when more than one is meant).
 - RIGHT:** 1 mm, 500 mm, 1 kg, 36 kg
 - WRONG:** 500 mms, 36 kgs
 - BUT:** It is correct to pluralize written-out metric unit names: 25 kilograms, 250 milliliters
- The symbol for a compound unit that is *a quotient of two units is indicated by a solidus* or by a negative exponent.
 - RIGHT:** km/h or km·h⁻¹ (for kilometers per hour)
 - WRONG:** kmph or kph (do *not* use p as a symbol for “per”)
 - BUT:** It is correct to say or write “kilometers per hour”.
- The meaning of an SI symbol can be changed when substituting a capital letter for a lower case letter.
 - RIGHT:** mm (for millimeter, which means 1/1000 of a meter)
 - WRONG:** MM or Mm (M is the prefix for mega, which means one million; a megameter is a million meters)

Note: A 5K race would be a five Kelvin race, while a 5k race would be a five kilo race, neither of which would be accurate. Kilometer should be pronounced KILL-oh-meet-ur, not kill-AHM- it-ur.

The information above was adapted from the U.S. Metric Association Website, <http://www.metric.org>. Students are encouraged to visit this Website for more information.

EXAMPLES OF CORRECT AND INCORRECT USAGE		
▼ For	▼ Correct Usage	▼ Incorrect Usage
kilometer	km	Km, km., KM, kms, K, k
meter	m	M, m.
millimeter	mm	Mm, mm., MM
liter	L or l	L., l.
milliliter	mL or ml	ML, MI, mL., ml., mls
kilogram	kg	KG, KG., Kg, Kg., kgr, kgs, kilo
gram	g	G, G., g., gr, GR, GRM, grms
microgram	µg	mcg
hour	h	hr, hrs, HR, h., HR., HRS.
second	s	sec, S, SEC, sec., s., S.
cubic centimeter	cm ³	cc
kilometer per hour	km/h	KPH, kph, kmph, km/hr
kilohertz	kHz	KHz, KHZ, Khz
megahertz	MHz	MHZ, Mhz
hectopascal	hPa	HPa, HPA, Hpa, mb
kilopascal	kPa	KPa, KPA, Kpa
degree Celsius	°C	C, deg CS
kelvin	K	°K, deg K

Required Experimental Research

There will be significant changes in the scoring rubrics this year due to the obvious conclusion that has been drawn that “one size does not fit all.” Every project does not fit under what is typically called The Scientific Method whereby a student formulates a hypothesis, devises an experiment, identifies a variable and establishes controls, collects data. You know the drill. There are other kinds of projects which can be designated as “design” projects. These typically may fall under the category of mathematics, engineering, astronomy, and some others.

There are no identifiable controls and variables in a mathematical algorithm. A student may choose to use data collected by OSHA that is in the public domain and apply new meaning to it or may observe some astronomical phenomenon while working on a project using photos downloaded from the Hubble Space Telescope. Another student might fabricate a model of a new kind of heart valve material. None of these projects would lend themselves to the scoring rubric that is used for judging experimental projects.

Below are details how the two different types of projects will be judged. You will have to select whether your project is an Experimental Project or a Design Project.

1 Research Document

The Research Document is the grouping of all data pertinent to the investigation. It should include graphs, charts, a log of experiments, interviews with authorities, and an extensive explanation of the investigation. This document, which may number many pages, is the personal property of the researcher. This compilation of personal records is the source from which the Abstract and the Research Summary are developed

The design and arrangement of this document are left to the discretion of the researcher. Since this is a “one-of-a-kind” document, extreme care should be used in handling. It should be exhibited only when the researcher is present at his/her project.

2 Science Project Paper

The Science Project Paper must be typed, it is to have no binder or protective cover and must be securely stapled in the upper left corner. Students selected to participate in the City Science Fair will be assigned an exhibit number. The exhibit number must be written in the upper right corner of each copy of the Abstract, Safety Sheet, and Title Page. The Science Project Paper must be no longer than 30 pages (up to 33 pages only if an endorsement is included). The page total includes Abstract, Safety Sheet, endorsement (if required), and the Research Summary (title page, table of contents, body of paper, reference list of literature cited, and appendixes of data, graphs, photos, and other items). The page limit and other criteria will be strictly enforced. Papers submitted with excess pages will have the excess pages removed and returned to the author.

All of the following sections should be included and in this order.

a. Abstract

The *Abstract* is a concise, one-page abbreviation of the *Research Summary*. It should contain only information or statements that are an inherent part of the *Research Summary*. This paper must use the exact form presented on page 59 and must be typed. The *Abstract* consists of three paragraphs (purpose, procedure, and conclusions) having a total of 200 words or fewer. *The Abstract is required for all projects.* Words and phrases should be carefully chosen so that the full impact of the research is conveyed in the minimum number of words. *The limit of three paragraphs consisting of 200 words or fewer will be strictly enforced.* The *Abstract* must be displayed on the front of the exhibitor's display board.

b. Safety Sheet

The purpose of the *Safety Sheet* is to keep students aware of all actual and potential safety hazards. Describing hazards involved with the project on the *Safety Sheet* does not mean the project will be disqualified. The important issue is how the potential hazards were handled.

A statement of the hazards encountered and precautions taken in the project is to be prepared by the student and signed by both the student and the sponsoring teacher. The *Safety Sheet* is found on page 61 of this handbook. High school students who want to be considered for the ISEF will need to download the proper forms. The *Safety Sheet* is required for all projects and must be displayed on the front of the exhibitor's display board.

c. Endorsement

Projects using humans, vertebrates, firearms or potentially hazardous biological agents often pose risks to the student researcher or the test subjects. For this reason, the plans for such projects must be reviewed by a team of qualified scientists and science teachers before experimentation begins. When permission is granted, the student is provided with a document called an endorsement. Endorsements are required for research on vertebrate animals (including humans), human or vertebrate tissue, recombinant DNA, for some projects involving microorganisms, and for use of firearms. (See pages 10 -22 of this handbook to determine whether a project requires an endorsement.) A copy of the endorsement(s) must be displayed on the front of the exhibitor's display board.

d. Research Summary

The *Research Summary* is a condensation of the *Research Document*. It should be an accurate summary of the research done by the student and should reveal the experimentation and/or observations which have been made. Specific criteria have been established for the preparation of this report. Details for writing this paper follow.

The components of the format of the *Research Summary* are as follows:

- i. Title Page:** See page 56 for correct format.
- ii. Table of Contents:** The list of topics or matter contained in the paper, including page numbers.
- iii. Acknowledgments:** A listing of persons or agencies that gave the student guidance and helped with this research. It may include a single individual, an organization, a hospital, or some other agency.
- iv. Purpose and Hypothesis:** An explanation of what is to be accomplished by doing this research. A description of the expected outcome should be included.
- v. Review of Literature:** A discussion of the background information that helps establish the hypothesis and explains procedures adapted for the experiment where necessary. Also any similar research that helps establish the hypothesis or procedure. Other background information about the topic that may help the reader understand the project should also be included. Paraphrased information should be cited as such. No references to the literature are to be placed in footnotes. Citation to particular pages in the text should be in the form (Smith, 2010, p. 10); for a general citation in the text (Smith, 2002). This citation should be placed at the end of the sentence to which it refers. The style for citations is based on the *Publication Manual of the American Psychological Association*, 6th ed., (APA style) which is the official style manual for the Illinois Junior Academy of Science. Materials with a copyright date within the last seven years should be used whenever possible.
- vi. Materials and Methods of Procedure:** A listing of the materials used in the research. How the materials in the research problem were used should be included. The method used in research should be described in sufficient detail so that others may duplicate this work. Drawings and/or photographs are appropriate if they enhance or clarify the explanation.
- vii. Results:** A clear, concise presentation of all the data accumulated as a result of the procedure, including data inconsistent with the hypothesis. All data is valuable. Drawings, charts, graphs, and other items pertinent to the project are important in conveying results and should be included. Caption all photographs. Label all drawings, charts, graphs. Include units of measurement. Always label axes of the graphs.
- viii. Conclusions:** A concise evaluation and interpretation of the data and results. Opinions of the results may be expressed in this section. The conclusions should be limited to results of the investigation and should refer to the stated purpose and hypothesis. The effects of experimental error should be estimated and considered while drawing conclusions.
- ix. Reference List:** A list of at least 12 published articles, books, and other communications, including works either quoted or paraphrased that are actually cited in the Review of Literature. Use the format described in the *Publication Manual of the American Psychological Association*, 6th ed. (APA style). The reference list should be presented alphabetically by author's last name and should be placed at the end of the paper. (The correct style for listing references can be found on pages 30–33.)

Required Design Research

1 Design Research Document

The *Design Research Document* is the grouping of all data pertinent to the investigation. It should include graphs, charts, a log of the work done, interviews with authorities, and an extensive explanation of the investigation. This document, which may number many pages, is the personal property of the researcher. This compilation of personal records is the source from which the *Abstract* and the *Research Summary* are developed.

The design and arrangement of this document is left to the discretion of the researcher. Since this is a “one-of-a-kind” document, extreme care should be used in handling. It should be exhibited only when the researcher is present at his/her project.

2 Design Project Paper

The Design Project Paper must be typed, it is to have no binder or protective cover and must be securely stapled in the upper left corner. Students selected to participate in the City Science Fair will be assigned an exhibit number. The exhibit number must be written in the *upper right corner of each copy of the Abstract, Safety Sheet, and Title Page*. The *Design Project Paper* must be no longer than 30 pages (33 pages if an endorsement is included). The page total includes *Abstract, Safety Sheet, endorsement (if required), and the Research Summary (title page, table of contents, body of paper, reference list of literature cited, and appendixes of data, graphs, photos, and other items)*. The *page limit and other criteria will be strictly enforced*. Papers submitted with excess pages will have the excess pages removed and returned to the author.

All of the following sections should be included and in this order.

a. Abstract

The *Abstract* is a concise, one-page abbreviation of the *Research Summary*. It should contain only information or statements that are an inherent part of the *Research Summary*. This paper must use the exact form presented on page 59 and must be typed. The *Abstract* consists of three paragraphs (purpose, procedure, and conclusions) having a total of 200 words or fewer. *The Abstract is required for all projects*. Words and phrases should be carefully chosen so that the full impact of the research is conveyed in the minimum number of words. *The limit of three paragraphs consisting of 200 words or fewer will be strictly enforced*. The *Abstract* must be displayed on the front of the exhibitor's display board. A sample abstract is available later in this Handbook.

b. Safety Sheet

The purpose of the *Safety Sheet* is to keep students aware of all actual and potential safety hazards. Describing hazards involved with the project on the *Safety Sheet* does not mean the project will be disqualified. The important issue is how the potential hazards were handled.

A statement of the hazards encountered and precautions taken in the project is to be prepared by the student and signed by both the student and the sponsoring teacher. The *Safety Sheet* is found on page 61 of this handbook. High school students who want to be considered for the ISEF will need to download the proper forms. The *Safety Sheet* is required for all projects and must be displayed on the front of the exhibitor's display board.

c. Endorsement

Projects using humans, vertebrates, firearms or potentially hazardous biological agents often pose risks to the student researcher or the test subjects. For this reason, the plans for such projects must be reviewed by a team of qualified scientists and science teachers before experimentation begins. When permission is granted, the student is provided with a document called an endorsement. Endorsements are required for research on vertebrate animals (including humans), human or vertebrate tissue, recombinant DNA, for some projects involving microorganisms, and for use of firearms. (See pages 10 -22 of this handbook to determine whether a project requires an endorsement.) A copy of the endorsement(s) must be displayed on the front of the exhibitor's display board.

d. Research Summary

The *Research Summary* is a condensation of the *Research Document*. It should be an accurate summary of the research done by the student and should reveal the experimentation and/or observations which have been made.

Specific criteria have been established for the preparation of this report. Details for writing this paper follow.

The components of the format of the *Research Summary* are as follows:

- i. Title Page:** See page 56 for correct format.
- ii. Table of Contents:** The list of topics or matter contained in the paper, including page numbers.
- iii. Acknowledgements:** A listing of persons or agencies that gave the student guidance and helped with this research. It may include a single individual, an organization, a hospital, or some other agency.
- iv. Define a need:** Instead of stating a question, state a need. Can you describe in detail a problem that your design will solve?
- v. Review of Literature:** A discussion of the background information that helps establish the need and explains procedures adapted for the testing of the prototype or algorithm. Also any similar research that helps establish the above. Other background information about the topic that may help the reader understand the project should also be included. Paraphrased information should be cited as such. No references to the literature are to be placed in footnotes. Citation to particular pages in the text should be in the form (Smith, 2002, p.10); for a general citation in the text (Smith, 2010). This citation should be placed at the end of the sentence to which it refers. The style for citations is based on the Publication Manual of the American Psychological Association, 6th ed., (APA style) which is the official style manual for the Illinois Junior Academy of Science. Materials with a copyright date within the last seven years should be used whenever possible.
 - a. For a design project, the Review of Literature may include:**
 - i.** The definition of your target user
 - ii.** Information about the science behind your design area
 - iii.** Answers to research questions about user needs
 - iv.** Information about products that meet similar needs
 - v.** Research about design criteria
 - vi.** What existing solutions are out there already, and how well do they solve the problem?
 - vi. Materials and Methods of Procedure:** A listing of the materials used in the research. How the materials in the research problem were used should be included. The method used in research should be described in sufficient detail so that others may duplicate this work. Drawings and/or photographs are appropriate if they enhance or clarify the explanation.
 - a. Establish Design Criteria**
 - i.** Engineering Projects: Decide what features your design must have, for example: size, weight, cost, performance, power, etc. Perhaps include a table showing how each design criterion will be addressed by a feature of the product being designed.
 - ii.** Computer Science Projects: Creating or writing a new algorithm to solve a problem or improve on an existing algorithm. Discuss the criteria of the algorithm.
 - iii.** Mathematics Projects: Proofs, solving equations, development of a new theory or explanation, concept formation or mathematical model design.
 - b. Prepare a Preliminary Design**
 - i.** Engineering projects should have a materials list, programming and mathematical projects do not need a materials list. Engineering projects should include a block diagram or sketch of the design that shows all of the parts or subsystems of the design. Describe how all of the parts of the design will need to work together. Computer science and mathematics projects should list a specific goal or solution that the researcher is trying to attain.
 - ii.** Build and Test a Prototype. When others are conducting their experiment, investigators doing engineering, computer programming, or mathematics projects should be building and/or testing a prototype of

their best design. You should involve targeted users in your testing to get feedback on your design, if possible.

- iii. Demonstrate that the design meets each of the design criteria established at the beginning of the project. What needs to be changed and retested? Test results may be included in tables, if applicable. Data analysis may also be a part of this step.
- vii. **Results:** Your report should provide all the information necessary for someone who is unfamiliar with your project to understand what you were trying to accomplish, how you did it, and whether you succeeded. The report should not only talk about your successful design attempts, but also the problems you encountered and how you solved them. Be sure to explain what new knowledge has been gained and how it leads to further questions. A clear, concise presentation of all the data accumulated as a result of the procedure, including data inconsistent with the design. All data is valuable. Drawings, charts, graphs, and other items pertinent to the project are important in conveying results and should be included. Caption all photographs. Label all drawings, charts, graphs. Include units of measurement. Always label axes of the graphs.
- viii. **Conclusions:** A concise evaluation and interpretation of the data and results. Opinions of the results may be expressed in this section. The conclusions should be limited to results of the investigation and should refer to the stated established design criteria. The effects of experimental error should be estimated and considered while drawing conclusions.
- ix. **Reference List:** A list of at least 12 published articles, books, and other communications, including works either quoted or paraphrased that are actually cited in the Review of Literature. Use the format described in the *Publication Manual of the American Psychological Association*, 6th ed. (APA style). The reference list should be presented alphabetically by author's last name and should be placed at the end of the paper. The correct style for listing references can be found on pages 30-33 of this Handbook.

Writing conventions

The Research Summary should be written according to the information in this handbook. A clear and concise presentation is important in scientific communication. Use short, simple sentences in the third person point of view to clearly explain the project. Facts should be grouped logically without being repeated needlessly. The 30 page limit is adequate when this is done well. The paper should be well-typed, without errors in spelling, grammar, punctuation.

Be sure to include all necessary information without going beyond the section guidelines above. Have the Science Project Paper proofread to help ensure the guidelines have been followed consistently throughout the paper.

Paper layout

The Research Summary must be typed, using double spacing, on only one side of each sheet of paper, using a standard font and size, such as Times New Roman and 10- or 12-point font size.

A margin of 2.5 cm (1") must be maintained on the left and right sides, top, and bottom of each page. All pages must be numbered and referenced in the Table of Contents.

The *Title Page of the Research Summary* must be formatted as shown on page 56. The signature of the sponsoring teacher and the school coordinator as well as the student's name, address, zip code, school, and grade must be positioned as shown in the example.

The student's last name and the title of the project must be typed at the top left of the Table of Contents. Each subsequent page should have the student's last name and title of the paper at the top left (Example, Smith: The Effect of Sunlight on Plants). Use the last name of the first student listed on the Abstract.

Exhibitors are required to have **nine** copies of the *Science Project Paper*. *Duplicating services will not be provided for those lacking the required number of copies. Students must have the required number of copies when they report to the museum. Of this number, eight copies are to be submitted to the Judging Committee and one copy is to be retained at the exhibit site.* The student should always retain the original copy.

Use the Checklist for the Physical Arrangement of the Science Project Paper on pages 57-58 before submitting the paper.

Reference List Format

The correct style to use for citing references in the Reference List section is discussed in detail in the most current *Publication Manual of the American Psychological Association, 6th Edition* (APA style). Be careful to follow the exact punctuation, indentation, and format shown in the samples. The Reference List must be double-spaced. Note: If using the *APA Publication Manual*, all *example* references are single-spaced to save space in the *Publication Manual*. The Reference List should be alphabetized according to the first letter of each entry. Entries should be formatted using a hanging indent. Entries should begin flush left and the second and all subsequent lines should be indented. Italics are preferred over the use of underlining. The abbreviation for Page(s), p. or pp. is not used except in references to newspapers. Electronic sources must provide the date the information was retrieved, and also the name and/or address of the source.

The following are examples of how to cite a reference in the *Review of Literature*

1. One method of citing a direct quote in the research paper should be in the form: She stated, “The ‘placebo effect,’ which had been verified in previous studies, disappeared when behaviors were studied in this manner” (Miele, 2001, p.276), but she did not clarify which behaviors were had been studied.
2. A paraphrasing of the text should be in one of the following forms:-as Smith (2002) demonstrated...
-as has been demonstrated (Smith, 2002).

Sources of Information

▼ Books

Book - One author:

Arnheim, R. (2001). *Art and visual perception*. Berkeley, CA: University of California Press.

Book - Multiple authors:

When a work has between two and six authors, cite all authors. When a work has more than six authors cite the first six authors followed by “et al.” to indicate the remaining authors.

Festinger, L., Riecken, H., & Schachter, S. (2003). *When prophecy fails*. Minneapolis: University of Minnesota Press.

West, S., Sandler, I., Tein, J., Ivy, P., Patterson, H., Roeder, K., et al. (2001). *Nerve cells and insect behavior*. Cambridge, MA: Harvard University Press.

Book- Corporate author:

Institute of Financial Education. (2001). *Managing personal funds* Chicago: Midwestern Publishing.

Book - Edited volume:

Maher, B. A. (Ed.). (2003). *Progress in experimental personality research*. New York: Academic Press.

Letheridge, S., & Cannon, C.R. (Eds.). (2001). *Bilingual education: Teaching English*

Book - No author:

Exhibit Guidelines

Display Design and Evaluation

- **The exhibit must not exceed dimensions of 61 cm (24") front to back and 107 cm (40") from side to side. Build the exhibit no higher than 152 cm (60")** No overhang is allowed. If the scientific apparatus exceeds the height limit, use photographs to show what has been done. No part of the project may be placed on the floor.
- Construct your own exhibit; teachers and parents are to provide only the necessary guidance, encouragement, and constructive criticism.
- Keep the title of your project brief, captivating, and prominently visible on the exhibit. **It may contain no more than 45 characters and spaces.** Titles in excess of 45 characters will be shortened to fit into available space on the entry form.
- Determine the best way to present the research. The presentation may include graphs, charts, and demonstration of design apparatus only (must meet safety inspection guidelines). **Attach a copy of your Abstract, Safety Sheet, and Endorsement(s) (if necessary) to the front of your display board.** These documents must be part of your display board and cannot be attached to the board with clips, block the view of posted information on the display board or overhang on any side of the display board. The Abstract and Safety Sheet can be reduced to one half of a page (when duplicating print at 65% reduction of original) for display. Less than 65% reduction is not acceptable.
- No apparatus will be allowed to be displayed, except for Design apparatus (must have safety check approval) - display board and computer only. Pictures, drawings, diagrams and video footage of experiment should replace equipment. Computers may be used to enhance the presentation, **but media presentations, such as, PowerPoint, Prezi or Google Slides, are not acceptable.**
- Exhibits must conform to size limitations. No easels or tripods are allowed on the floor around the exhibit. Floor-mounted exhibits will not be considered for competition.
- Exhibits must be constructed so that wall space is not required. All exhibits must be freestanding. Objects may not be attached to draperies or the exhibitor identification sign. No lighting of any type may be used to illuminate the exhibit. No items may be stored under the exhibit table.
- The City Science Fair Exhibits Committee will provide space on a table, a table covering, an identification sign, and an extension cord (if needed). The student must provide all other needs of his/her exhibit (for example, tape, staples...). The exhibit space can only accommodate a display of the following dimensions: 61 cm deep, 107 cm wide, and 152 cm high.
- All equipment and materials are exhibited during the fair at the risk of the exhibitor. The Science Fair Exhibits Committee, the CPS Student Science Fair, Inc., and the Museum of Science and Industry assume no responsibility for loss or damage to such equipment and materials. A security room is available for overnight storage of valuables.
- Normal wear and tear on exhibits is to be expected during the time the fair is open to the public. For this reason, each exhibitor is advised to protect his/her project as completely as possible. Valuable equipment should be fastened securely to prevent its removal and should be safely stored when the exhibitor is away from his/her project.

Presentation Tips

The exhibitor's personal appearance adds to the attractiveness of the exhibit. Students should dress neatly and appropriately for the occasion.

- Be well versed in as many aspects of the project as possible.
- Be enthusiastic about the project.
- Prepare not only for direct questions pertinent to the research but also for related questions.
- Students who require a language interpreter or sign language interpreter are encouraged to seek the assistance of their sponsoring teacher in making arrangements to have one available during judging sessions. Arrangements for the use of a sign language interpreter can be made through the CPS Office of Diverse Learner Support & Services (773-553-1882). For information in obtaining a language interpreter contact the Office of Language and Cultural Education (773-553-1930). The research summary paper must be in English.

Safety Guidelines for Project Display

The City Science Fair is an opportunity to communicate research findings. Part of the judging process is to evaluate each exhibitor's ability to present research findings to judges. By this time, experiments have been completed and data have been collected, analyzed, and interpreted. This is not the time to perform experiments. The City Science Fair is not a place for demonstration. All lab equipment should be left at home or at school. Pictures, drawings, and diagrams should replace equipment.

Glassware Hazards

No glassware may be displayed. The only glass that may be allowed for display is that which is an integral part of a piece of apparatus.

Chemical Hazards

No chemicals may be displayed. Photographs or drawings may be attached to the presentation board to illustrate chemicals used in the experiment. Food or drugstore products, such as toothpaste, deodorant, mouthwash, antacids, sleep aids, aspirin, sunscreens, and so forth, may not be displayed, although their clean, empty packages may be displayed. Water may not be displayed.

Hazardous Materials

Explosive, flammable, corrosive, or highly poisonous substances are not to be brought to any exhibit area. This includes gasoline, alcohol, and lighter fluids. Armed rockets or their propellants are prohibited. Cylinders for compressed gas or aerosol cans are not allowed in the display area. Automobile storage batteries containing sulfuric acid are not allowed. Any approved substances must be shielded in such a way that maximum protection is provided for spectators, neighboring exhibitors, judges, and the student exhibitor. No firearms of any type may be brought to any exhibit area. No drones may be displayed unless they are part of a Design Project. No drones may be operated during the science fair.

Fire Hazards

Open flames, torches, electric heaters, or burners are not to be displayed.

Radiation Hazards

Projects dealing with radiation from cathode rays, X-rays, or radioactive materials must present no hazard to the public or the student exhibitor.

Laser Hazards

No lasers may be displayed. Any laser used in an experimental or design project must be no greater than Class 2 (visible-light continuous wave lasers under 1 mW such as red laser pointers) without special registration from the State of Illinois (see below). In general the lowest class laser possible should be used for a given project. The revised laser classification system along with associated hazards and safety precautions are reviewed at http://en.wikipedia.org/wiki/Laser_safety. Each experiment using lasers should clearly

state the safety precautions taken. Under special circumstances, where the use of such a laser is absolutely critical to the success of a project, Class 3R lasers (also labeled as Class 3A for older lasers) may be used. These lasers require written documentation of registration from the State of Illinois and need to follow all applicable safety precautions required by the State (<http://www.illinois.gov/iema/NRS/RadSafety/Pages/Laser.aspx>). The scientific justification for using a 3R / 3A laser must be explained, and incorporation of these extra safety precautions must be written into the experimental procedures. Among other practices, we require that 3A lasers use a protective housing or barricade which, when in place, prevents human access to the beam during operation. Under no circumstances may lasers above Class 3R / 3A be used in any project.

Ultraviolet Light Sources

Use approved ultraviolet light sources only upon a judge's request and do not direct them toward anyone's eyes. The device must be properly shielded.

Electrical Hazards

All electrical equipment must be constructed according to standard electrical safety codes. If there is doubt, consult with an electric shop teacher or an electrician. The city of Chicago's electrical code for public exhibits requires all electrical devices connected to the circuits within the building to be grounded using type SO three-wire conductors.

All wiring, switches, and metal parts carrying current must be completely enclosed by barriers on all sides to absolutely prevent observers from reaching into the exhibit where they might receive an electrical shock.

Exhibits requiring electricity must have the *three-pronged* or *polarized* electrical plug attached to the end of the eight-foot or longer electrical cord on all exhibits except those using lamps only. All electrical apparatus must have the UL label. All electrical extension cords needed for science fair projects will be provided for exhibitors at the Museum of Science and Industry. *You will not be allowed to provide your own cord at the City Fair.*

Doorbell push buttons must not be used to control 110 volt apparatus. Use *toggle* or *push-button* switches designed for proper load. *Non-insulated switches*, such as *knife switches*, will not be permitted. All electrical joints must be properly secured and insulated. All electrical joints must be permanent and soldered.

Federal Communications Commission (FCC) regulations are specific with regard to spark-discharge equipment. If equipment containing such devices is used, the machine must be operated so that it does not cause harmful interference to normal channels of communication. The judges are sufficiently aware of the operations to understand what is intended with the spark-discharge device, provided that the student can explain the operations in his/her own words. Students must not operate equipment until authorized by the judges to do so.

Mechanical Hazards

All moving parts of machines and/or electrical circuitry must have adequate protective coverings or guards.

Push-buttons and levers must be securely mounted on exhibits. They must not be attached to tables or walls.

Materials and construction must be durable. All moving parts must be firmly attached. Power-driven parts must be protected with guards.

Equipment that emits disruptive sound is to be operated only at the judges' request. When hundreds of exhibits are on display, the sound can reach levels that distract the judges and exhibitors. Sound equipment not essential to the exhibit will not be permitted.

Biological Hazards

Cigarettes and tobacco may not be displayed. Clean, empty packages are allowed.

No live or preserved invertebrate or vertebrate animals may be exhibited. All vertebrate projects, including those dealing with humans, must have an approved *Vertebrate Animal Endorsement*. (See pages 13-14 of this handbook for rules regarding animal experimentation.)

It is imperative that students not be exposed to any bacteria that are considered pathogenic; for this reason, two rules are very strictly enforced:

1. *No primary or secondary cultures taken from humans or other warm-blooded animals may be displayed. This includes, but is not limited to, skin, throat, mouth, and other areas.*
2. *No display of cultures/fungi is permitted at the fair, although they may be used in experiments if incubated at or below room temperature.*

Hypodermic syringes, needles, and surgical tools cannot be part of the display.

Wild cultures cannot be displayed at a science fair exhibition.

No materials may be displayed that can undergo a chemical or biological change. This includes molds, bacteria, yeasts, pond water, aquatic plants, and other potentially gas-producing substances. Those projects should display photographs or simulations instead of the actual materials and organisms used in the investigation.

All safety rules must be followed. Violations may result in disqualification. Refer all questions about safety to the Safety Committee Chairperson.

Chicago Public Schools Student Science Fair, Inc. is an affiliate of the Illinois Junior Academy of Science and the International Science and Engineering Fair. As such, Chicago Public Schools Student Science Fair, Inc. is obligated to enforce the rules of those organizations even when their rules change after the publication of the handbooks. Every attempt is made to inform coordinators and sponsors of these rule changes as soon as they are known. Students selected to participate in these fairs will receive the handbook of the appropriate organization which contains specific rules that pertain to the organization.

Safety Sheets

The *Safety Sheet* (see page 61) signed by the student and his/her sponsor must be included in the *Research Summary* pages 25-26 (Scientific Research) and pages 27-28 (Design Papers). This sheet must specify any and all actual and potential hazards, as well as the specific measures used as safeguards. *Any violations of safety rules may result in disqualification and removal from the fair.* The *Safety Sheet* must be displayed on the front of the exhibitor's display board. It may be reduced to fit on a half sheet of letter-size paper. When making a copy print at 65% reduction of original page. See page 34 for more details.

SAFETY SHEET

The Illinois Junior Academy of Science

Directions: The student is asked to read this introduction carefully, fill out the bottom of this sheet. The science teacher and/or advisor must sign in the indicated space. By signing this sheet, the sponsor assumes all responsibilities related to this project.

Safety and the Student: Experimentation or design may involve an element of risk or injury to the student, test subjects and to others. Recognition of such hazards and provision for adequate control measures are joint responsibilities of the student and the sponsor. Some of the more common risks encountered in research are those of electrical shock, infection from pathogenic organisms, uncontrolled reactions of incompatible chemicals, eye injury from materials or procedures, and fire in apparatus or work area. Countering these hazards and others with suitable controls is an integral part of good scientific research. In the **chart** below, list the principal hazards associated with your project, if any, and what specific precautions you have used as safeguards. Be sure to read the entire section in the *Policy and Procedure Manual of the Illinois Junior Academy of Science* entitled "Safety Guidelines for Experimentation" before completing this form.

Possible hazards	Precautions taken to deal with each hazard

Please check off any other possible endorsements needed. Include these documents in your paper and on your board.

- Human as Test Subjects -for any projects involving humans-even surveys.
- Microorganism-for any projects involving bacteria, viruses, yeasts, fungi or protozoa
- Non-Human Vertebrates -for any projects involving fish, amphibians, reptiles, birds or mammals
- Tissue Culture-for any projects involving growing eukaryotic tissues or cell cultures
- Recombinant DNA-must be conducted in a registered research laboratory under professional supervision
- Use of Firearms - including all required documents
- Letter from institution where research was done or IJAS SRC-if an exception to the IJAS rules has been granted.

*As a sponsor, I assume all responsibilities related to this project.

This Sheet Must Be Typed and This form must be displayed on the front of the exhibitor's display board. It may be reduced to half a sheet of paper; 8.5 inches (vertical) X 5.5 inches (horizontal). Print at 65% reduction.

Part Two: Symposium, Essay, Cover Design Contest, International Science & Engineering Fair , and QED

Science Fair Symposium

A major part of the annual Chicago Public Schools Student Science Fair, the Symposium is an opportunity for the exchange of ideas between a student presenter and a panel of university and industrial scientists in a particular area of science or mathematics. This differs from the Exhibit presentations which are several discussions between the student scientist and individual judges at different times. Emphasis is placed on a student's inherent scientific interest and his/her ability to express himself/herself completely and correctly in oral and written form.

Like Science Fair Exhibitors, symposium entrants are required to conduct original research as a basis for the Symposium paper. However, this research need not be exhibited at the City Science Fair. The research project and paper requirements for exhibits and the Symposium are identical. The page limit of 30 pages also applies. Only the format for presentation differs.

Entry Procedure

Each school is allowed to submit to the Symposium & Essay Committee no more than 30 research papers (including both Symposium papers and Essay papers). The school science fair coordinator should screen the papers before submission. The School Science Fair coordinator must make sure four copies of each qualifying paper including Symposium Entry Form and the complete symposium paper (of which the sequence and contents are listed on page 89) are received by Jennifer Patush, Symposium & Essay Co-Chairperson no later than **Thursday, January 12, 2017**. **Additionally, each Abstract, Safety Sheet, Endorsement (s) and Research Summary must be sent as one PDF file to cpssciencefair@gmail.com by this deadline.** There will be no extension of the deadline. Papers submitted after the deadline will be stamped Deadline, dated, and returned to the author.

Students entering both the Symposium and the Exhibits presentations need to submit four copies for Symposium in addition to the copies needed for the Exhibit presentation.

Papers submitted by the due date will be read and evaluated by the Screening Committee. **All schools submitting Symposium Papers are required to send Readers to Curie High School on January 28, 2017. The Symposium Reading hours are from 9:00am-3:00pm.** All papers that do not follow the guidelines in this handbook (pages 39-43) will be returned to the student. Students and their sponsors whose papers are selected will be notified by email on February 16, 2017 and given a complete set of instructions for participation in the City Science Fair Symposium. Examine the Symposium Paper/IJAS State Essay Checklist on page 89 for helpful information in completing the Symposium paper.

Symposium Program

An orientation meeting for all finalists will be held at the Museum of Science and Industry before the Symposium date to familiarize the students with the Symposium room locations and available audiovisual equipment. Participants will receive information about the presentation format and presentation schedule. During the Symposium presentation each finalist will be given 10 minutes to present his/her paper, followed by a five-minute question-and-answer period. The presentation may be read, given from notes, or a computer presentation (preferred). Students may use programs such as Powerpoint, Prezi, or Google Slides to create their presentation.

All participating students must remain for the entire morning or afternoon session. Computers with LCD projectors will be available for student use during their presentation. The main task of the participant is to present (in the time allotted) a recapitulation of his/her Research Paper, highlighting the Purpose, Hypothesis, Review of Literature, Materials, Procedure, Results, and Conclusion(s). Judges will not accept revisions of student papers after they have been received by the Symposium & Essay Committee. Further research, conducted after the regional and/or city fairs, however, may be presented as a written addendum given to the judges at the time of the oral presentation.

The 15 top scoring Symposium participants proceed to the IJAS state paper session and will each receive cash awards.

State Essay Contest

Students in Grades 7 through 12 may compete with a library research paper in the “Essay Only” segment of the Illinois Junior Academy of Science Paper Session Competition. However, this does not rule out the possibility of personal experimentation as a supplement to the library research.

Topic 2017 - “Engaged Learning”

General IJAS Essay Guidelines:

Make sure the topic is narrow enough to write a proper essay--do not try to overview every topic that relates to the theme.

- Choose a topic that has been developed or is being theorized.
- Support your topic’s significance through research.

Structure of the Essay:

- The author must follow the essay theme: as specified in this handbook and on the www.cpsssf.org website
- The author must use the formal essay style that adequately expresses the chosen topic.
- The essay must be original and follow the basic rules of essay writing.

Essay Entry Procedures

Students are to submit to the school coordinator four copies of their essay and three copies of the 2017 Student Science Fair Official Entry Form for Symposium and Essay Competition. Each essay must include the Essay Cover Page. Students should keep the original copy of their essay. Essays are due to Jennifer Patush, by **Thursday, January 12, 2017**. The physical arrangement of the essay must be as follows:

- Essay Cover Page (See sample in the Appendix, page 91) Give the essay a title that is indicative of the content of the essay.
- If supplemental experimentation is used, a Safety Sheet and any applicable endorsement(s) must be attached.
- Table of Contents
- Introduction
- Body–Discussion, including an alternate point of view or counter argument
- Conclusion or Summary
- Reference List – A list of published articles, books, and other communications actually cited in the essay, using APA format. Do not refer to this list as a bibliography.

The essay should be 1,200 to 1,500 words. The essay should include at least 12 current references and no more than one reference to an encyclopedia. Students are to type their last name and the title of the essay at the top of each page. Papers should follow the basic rules of essay writing and should be carefully proofread. (See Symposium Paper/IJAS State Essay Checklist on page 89 for helpful information.)

Entries are to be received by Jennifer Patush at Curie High School, GSR #37, by Thursday, January 12, 2017. This deadline will not be extended. Papers submitted after the deadline will be returned unopened to the author. All schools submitting Essays are required to send Readers to Curie High School on January 28, 2017. The Symposium Reading hours are from 9:00am-3:00pm. For additional information, contact the science fair coordinator at your school.

Note: When submitting papers through GSR, send an email to cpssciencefair@gmail.com. You will be notified when papers are received.

IJAS Cover Design Contest

Any student in Grades 7 through 12 is eligible to take part in the cover design contest. Students do not need to compete with a project, paper, or essay in local, area, or state science expositions to be eligible. Submit all entries to: IJAS Cover Design CPS Student Science Fair, Inc., P.O. Box 803945, Chicago, IL 60680-3945. Entries must be received by December 16, 2016.

This year the theme of the design entry is **Engaged Learning**. Use an 8½" X 11" sheet of white paper for each entry. The design must be oriented portrait, not landscape. Indicate the words Illinois Junior Academy of Science on your design entry. This should be large enough to be seen. The design must be in black ink on white paper and must not be computerized. Keep the design simple. Please include the following information on the back of your entry: Your name, home mailing address, home phone number, school name, sponsor name, state region number (which is 3 for all Chicago public schools) and sponsor's email address.

The design committee will judge all entries. The top entries will be presented to the IJAS Student Officers and the final voting will take place. The entries of the top 10 finalists will be displayed at the State Science Exposition in May, and the designers of the winning entries (banquet brochure, T-shirt, and paper session brochure) will receive monetary awards.

International Science and Engineering Fair

Selection of Students

Four students who receive Gold awards at the City Science Fair will be selected to attend the International Science and Engineering Fair, held May 14 - 19, 2017, in Los Angeles, California. All expenses for the international competitions are funded by the Chicago Public Schools Student Science Fair, Inc. and its corporate sponsors.

Required Approvals and Forms

At the same time that students in Grades 9–12 apply for Scientific Review Committee endorsements and approvals, they should complete the required ISEF forms. If a project involves human subjects, it will be necessary to establish an Institutional Review Board at the local school. All students must meet with the project sponsor, obtain approval from the Scientific Review Committee, and complete the required ISEF forms before beginning experimentation. Use the chart on the following page to determine which forms must accompany the project.

Find specific information about International Science and Engineering Fair rules at:
<http://www.societyforscience.org/isef/rulesandguidelines>

Forms are downloadable at: <http://www.societyforscience.org/page.aspx?pid=282>.

QED

QED is Chicago's only Youth Math Symposium, essentially a science fair for participants whose projects are in mathematics, applied mathematics, or computer science. Participants are divided into three divisions: Junior, grades 5-6; Intermediate, grades 7-9; Senior, grades 10-12. Any public school student in Chicago (including those attending charter schools) at these grade levels is eligible to participate.

To participate in QED, students need to complete an original paper on a math or computer science research topic. Junior and Intermediate papers are 3-5 pages, and Senior papers are 10 pages or more. Instructions for the content of the paper can be found at our website at <https://mathcirclesofchicago.org/qed/>. Participants also bring a traditional science fair presentation display to facilitate their presentations at QED.

Students interested in completing a QED project but who need support can participate in the QED Advisor Program. Email qed@mathcirclesofchicago.org to inquire. Generally QED Advisors are graduate students in Mathematics from Chicago universities (DePaul, the University of Illinois at Chicago, University of Chicago, etc.) who will provide support through email and phone calls. Also consider registering for sessions at the Math Circles of Chicago--attending these sessions are an excellent way to generate research ideas: <https://mathcirclesofchicago.org/>

QED will be held on Saturday, December 3rd, 2016, at Walter Payton College Prep. Students can pre-register after September 15th but no later than November 12th; Senior papers must be submitted by this date (Intermediate and Junior papers do not need to be submitted prior to the Symposium itself).

At QED, each presentation is evaluated by two or three judges; the rubric our judges use is posted on our website. Projects are placed into three categories: Successful Contributor, Contributor with Distinction, and Contributor with High Distinction. The top six Senior level projects and the top six projects out of the Intermediate and Junior categories automatically qualify for the City Science Fair. The top six projects will need to adhere to the rules and regulations of participating in the City Science Fair as published in the 2017 Science Fair Handbook.

Patent and Copyright Information

You may want to consider applying for a patent or copyright if you want to protect your work. More information on Patents can be found at: <http://www.uspto.gov> or you can contact the Customer Support Center of the U.S. Patent and Trademark Office, at (800) 786-9199 or (571) 272-1000 for patent information. The Copyright Office at the Library of Congress can be reached at (202) 707-3000 or (877) 476-0778. You can also go to: <http://www.copyright.gov/> for copyright information.

Additional information can be obtained from two libraries that serve as patent depositories in Illinois: The Illinois State Library in Springfield; and the Harold Washington Library of the Chicago Public Library system (Science and Technology, 4th Floor).

Excerpts from *Basic Facts About Patents*

(Note: A copy of this booklet is available at the Harold Washington Library.)

What is a patent?

A **patent** is granted by the federal government to an inventor “to exclude others from making, using, offering for sale, or selling the invention throughout the United States or importing the invention into the United States.” There are three types of patents:

- **Utility** patents may be granted to anyone who invents or discovers any new and useful process, machine, article of manufacture, composition of matter, or any new useful improvement thereof.
- **Design** patents may be granted to anyone who invents a new, original, and/or ornamental design for an article of manufacture.
- **Plant** patents may be granted to anyone who invents or discovers and asexually reproduces any distinct and new variety of plant.

Answers to the following questions can be answered by reading *Basic Facts About Patents*.

How long does patent protection last?

Who owns the patent rights?

How do I get a patent?

Do I need to hire a lawyer?

What about patent promotion organizations?

Do I need to do a patent search before I apply?

Part Three: Guidelines for Judging Scientific and Design Exhibits and Papers

The main objective of an elementary or high school research project is to foster scientific experimentation and design process. The following criteria include those used by judges at the CPS Student Science Fair and at the IJAS state science fair. The maximum number of points possible are listed by section.

Judging Criteria

▼ EXPERIMENTAL PROJECT CRITERIA	▼ DESIGN PROJECT CRITERIA
<p>Scientific Method: (A-H) 53 Maximum Points</p> <p>A. Evidence of Knowledge Gained (8 points)</p> <ol style="list-style-type: none">1. Has the student acquired significant knowledge of skills by doing this project?2. Does the exhibitor recognize the scope as well as the limitations of the problem selected? <p>B. Evidence of Scientific Approach (8 points)</p> <ol style="list-style-type: none">1. Has the problem been well defined?2. Is the chain of reasoning clear and correct? <p>C. Evidence of experimental approach: variable (8 points)</p> <ol style="list-style-type: none">1. Did the student collect data from his/her own experiment?2. Did the student test a single variable for each experimental group?3. Were all other variables controlled or accounted for? <p>D. Evidence of experimental approach: control group/Comparison Group (8 points)</p> <ol style="list-style-type: none">1. Were methods of control appropriate, effective, and evident?2. Were methods of comparison made among trial groups, if appropriate? <p>E. Reliability of data (7 points)</p> <ol style="list-style-type: none">1. Are experimental results reported with appropriate accuracy?2. Is the collected data numerical and metric, where applicable?3. Has data been collected from repeated trials? Is it reliable?4. Are sources of experimental error described and/or evaluated? <p>F. Validity of conclusion (7 points)</p> <ol style="list-style-type: none">1. Has the student started with known facts, added new experimental information, and drawn relevant conclusions?2. Are the conclusions consistent with the data?3. Can the work be the basis for further experimentation?4. Can the work be replicated by others and similar conclusions drawn?	<p>Design Process: (A-H) 61 Maximum Points</p> <p>A. Design Processing Skills (8 points)</p> <ol style="list-style-type: none">1. Student exhibits a thorough understanding and application of the design process.2. Has the exhibitor acquired design skills? <p>B. Design Approach: Overall (8 points)</p> <ol style="list-style-type: none">1. Has a need or real world problem been identified?2. Was there a logical, orderly method for addressing the problem or need?3. Is the method appropriate and effective? <p>C. Design Approach: Performance Criteria (8 points)</p> <p>Did the student develop clear performance criteria to address the features of the product, algorithm, proof, model, etc.?</p> <p>D. Design Approach: Preliminary Design Plan (8 points)</p> <ol style="list-style-type: none">1. A clear plan was presented using a block diagram, flowchart or sketch.2. The design plan shows all of the parts and/or subsystems of the design and how they all work together. <p>E. Constructing and Testing the Design Prototype (8 points)</p> <p>The student has constructed and tested a prototype of his/her best design. This may involve targeted users and/or an analysis of data sets.</p> <ol style="list-style-type: none">1. The student shows evidence that changes in the design were made in response to initial testing in order to better meet the performance criteria established at the beginning of the project.2. If applicable, test results and data analysis/validation are present. <p>F. Redesign and Retest (8 points)</p> <ol style="list-style-type: none">1. The student shows evidence that changes in the design were made in response to initial testing in order to better meet the performance criteria established at the beginning of the project.2. If applicable, test results and data analysis/validation are present.

Judging Criteria *(continued)*

▼ EXPERIMENTAL PROJECT CRITERIA	▼ DESIGN PROJECT CRITERIA
<p>G. Estimating Experimental Error (2 points) Measurement error affecting the conclusion has been considered.</p> <p>H. Originality (5 points)</p> <ol style="list-style-type: none">1. Does the project demonstrate a novel approach or idea?2. Does the project demonstrate a high level of creativity? <hr/> <p>Display: (I & J) 8 Maximum Points</p> <p>I. Information (4 points)</p> <ol style="list-style-type: none">1. Does the display effectively support the theme of the investigation?2. Is the data on the display organized in the most explicit way to present the particular type of information involved?3. Are charts, pictures, and graphics appropriately used? <p>J. Artistic Qualities (4 points) Is the display neat, organized, and appealing with no spelling errors?</p> <hr/> <p>Verbal Report: (K & L) 8 Maximum Points</p> <p>K. Presentation Quality (4 points)</p> <ol style="list-style-type: none">1. Does the presentation clearly and precisely summarize the project?2. Is the information relevant and pertinent?3. Does the presentation include enough technical information to be convincing? <p>L. Dynamics (4 points)</p> <ol style="list-style-type: none">1. Does the student speak fluently with good eye contact?2. Is the presentation lucid, articulate, and interesting? <hr/> <p>Written Report: (M-W) 30 Maximum Points</p> <p>M. Abstract (3 points) Does the Abstract contain no more than 200 words in three paragraphs entitled: Purpose, Procedure, and Conclusion using the proper IJAS form?</p> <p>N. Safety Sheet (2 points)</p> <ol style="list-style-type: none">1. Have all safety hazards been identified?2. Does the safety sheet have appropriate signatures affixed? Are both present?	<p>G. Validity of evaluation/Conclusions (8 points) The conclusion accurately reports the successes and failures of the preliminary design, what changes were made and how the redesign more closely met the performance criteria.</p> <p>H. Originality (5 points)</p> <ol style="list-style-type: none">1. Does the project demonstrate a novel approach or idea?2. Does the project demonstrate a high level of creativity?3. Evidence shows that other designs were investigated that addressed the same need or real world problem. <hr/> <p>Display: (I & J) 6 Maximum Points</p> <p>I. Information (3 points)</p> <ol style="list-style-type: none">1. Does the display effectively support the theme of the investigation?2. Is the data on the display organized in the most explicit way to present the particular type of information involved?3. Are charts, pictures, and graphics appropriately used? <p>J. Artistic Qualities (3 points) Is the display neat, organized, and appealing with no spelling errors?</p> <hr/> <p>Verbal Report: (K & L) 6 Maximum Points</p> <p>K. Presentation Quality (3 points)</p> <ol style="list-style-type: none">1. Does the presentation clearly and precisely summarize the project?2. Is the information relevant and pertinent?3. Does the presentation include enough technical information to be convincing? <p>L. Dynamics (3 points)</p> <ol style="list-style-type: none">1. Does the student speak fluently with good eye contact?2. Is the presentation lucid, articulate, and interesting? <hr/> <p>Written Report: (M-X) 26 Maximum Points</p> <p>M. Abstract (2 points) Does the Abstract contain no more than 200 words in three paragraphs entitled: Purpose, Procedure, and Conclusion using the proper IJAS form?</p> <p>N. Safety Sheet (2 points)</p> <ol style="list-style-type: none">1. Have all safety hazards been identified?2. Does the safety sheet have appropriate signatures affixed?

Judging Criteria *(continued)*

▼ EXPERIMENTAL PROJECT CRITERIA	▼ DESIGN PROJECT CRITERIA
<p>O. Title Page/Table of Contents (2 points) Are both present?</p> <p>P. Purpose and Hypothesis (2 points) Has a problem been defined and a prediction made?</p> <p>Q. Review of Literature (5 points)</p> <ol style="list-style-type: none">1. Have known facts and principles been handled appropriately?2. Is literature cited pertinent to the topic and cited using American Psychological Association (APA) format? <p>R. Materials (2 points) Are the materials listed and measurements made in metric units where applicable?</p> <p>S. Procedure (2 points) Does the procedure follow a logical protocol with all steps included?</p> <p>T. Results (4 points)</p> <ol style="list-style-type: none">1. Are the results organized into tables and graphs and easily understandable by someone not familiar with the work?2. Is the data quantitative and explanations given when necessary? <p>U. Conclusions (3 points)</p> <ol style="list-style-type: none">1. Has the student stated known facts, added new experimental information, and drawn relevant conclusions?2. Is there a concise evaluation and interpretation of the data?3. Does the conclusion refer back to the purpose and hypothesis? <p>V. Reference List (3 points)</p> <ol style="list-style-type: none">1. Are the quality and quantity of references current and adequate for the topic?2. Are the resources listed cited within the Review of Literature using APA format? <p>W. Conventions (2 points) Are grammar and spelling correct?</p>	<p>O. Title Page/Table of Contents (2 points) Are both present?</p> <p>P. Acknowledgements (1 points) Credit has been given to those who have helped with the project.</p> <p>Q. Problem or Need (2 points) Has a real world problem or need been defined and a prediction made?</p> <p>R. Review of Literature (4 points)</p> <ol style="list-style-type: none">1. Have known facts and principles been re-searched in depth?2. Is literature cited pertinent to the topic and cited using American Psychological Association (APA) format? <p>S. Design Plan (2 points)</p> <ol style="list-style-type: none">1. Is the design plan complete and easy to follow?2. Are all parts and/or subsystems of the design included? <p>T. Results of Testing and Redesign (2 points)</p> <ol style="list-style-type: none">1. Have the testing results led to a redesign in order to meet the performance criteria?2. Are any changed in the design shown or explained clearly? <p>U. Evaluation/conclusion (2 points)</p> <ol style="list-style-type: none">1. Is there a concise evaluation and interpretation of the data?2. Does the conclusion refer back to the purpose of the design project? <p>V. Reference List (2 points)</p> <ol style="list-style-type: none">1. Are the quality and quantity of references current and adequate for the topic?2. Are the resources listed cited within the Review of Literature using APA format? <p>W. Technical Aspects (3 points)</p> <ol style="list-style-type: none">1. Has the student used standards for technical writing?2. Are grammar and spelling correct? <p>X. Neat and Orderly (2 points) Is neat and follows the format as illustrated on the left side of the judging rubric (items M-V)</p>

This Page Intentionally Left Blank

Part Four: Awards

In addition to the awards of *Gold*, *Silver*, and *Bronze*, the following presentations will be made.

Special Awards and Tours

Companies and organizations offer special awards and tours to selected exhibitors. These awards are made on the basis of criteria established by the companies or organizations that provide the special award. Judging in this category involves numerous diversified criteria and does not always correspond to the general evaluative judging all participants at the city science fair undergo. It should be noted that many of these awards are based on the subject matter of the project as well as its quality.

International Science and Engineering Fair (ISEF) Awards

Four students selected from among the projects earning Gold awards will compete at the ISEF in Los Angeles, California, May 14-19, 2017. Additional information can be found at the Science Service, Intel ISEF website: <http://www.societyforscience.org/isef> or email: isef@societyforscience.org

Illinois Junior Academy of Science (IJAS) Awards

Fifteen symposium participants and all exhibitors receiving a Gold award will be eligible to compete in the statewide competition held at Northern Illinois University, DeKalb, Illinois on Friday and Saturday, May 5 and 6, 2017. Additional information can be obtained from the IJAS website: <http://www.ijas.org>

This Page Intentionally Left Blank

Part Five: Programs

Research Grant Programs

Students who have started on their investigation by completing their library research and formulating an experimental design may apply for funds to reimburse expenses for supplies and equipment not normally available at the local school. All reusable equipment reimbursed through either the mini or maxi grant becomes the property of the school when the project is completed for future students to use.

The **Mini Research Grant Program** awards a maximum of \$100 per semester or \$200 per year to help finance the research of students in Grades 7–12. The application on pages 79–80 of this handbook, and can be found may be duplicated for your use. The Research Grant Committee awards grants on the basis of the application. Criteria included on the application will be used to evaluate projects and should be used as guidelines when applying.

Pre-approval for reimbursement - A student may apply by November 18, 2016 to be pre-approved for reimbursement prior to beginning experimentation if reimbursement will affect whether he/she wishes to purchase the materials and continue with the project. Applicants will be notified promptly by the Research Grant Committee whether they will be reimbursed for their materials should they pursue the proposed project. Students whose applications are approved must purchase only the materials for which they've applied and submit original receipts for these materials. A check for the exact amount of the materials will be issued only after original receipts have been received by the Research Grant Committee.

Post-project reimbursement - Alternately, a student may apply by February 26, 2017 (after purchasing the materials and finishing the science project) to be reimbursed should his/her project qualify. Students applying after purchasing materials must submit the original receipts for these materials and finished science project paper with the application.

A check for the exact amount of the materials will be issued only after original receipts have been received by the Research Grant Committee.

High school students whose funding requirements exceed \$100 should apply by February 26, 2017 for funds through the **Maxi Research Grant Program**. Students applying for a Maxi Research Grant must have participated in a past Area/Regional or City Science Fair. (The application for this grant appears on pages 81 - 82 of this handbook.) The application should be completed with careful attention to detail. Do not request equipment that is usually part of the school inventory.

Maxi Research Grant applications are screened by the Research Grant Committee and evaluated using an initial point system. If an application passes the initial screening, the student will be invited to a personal interview conducted by selected Chicago Public Schools Student Science Fair, Inc. committee chairpersons. *Maxi Research Grants are awarded to students on a one-time-only basis.*

A student may apply for either the Mini Research Grant or the Maxi Research Grant, but not both.

Advise-A-Student Program

The *Advise-A-Student Program* is designed to assist students who have exhausted the help of teachers and parents. Upon receipt of an application demonstrating that the student has completed the necessary library research, the committee attempts to find a research scientist who will provide expert help. The research scientist only provides suggestions on improving the project and should not be asked to provide equipment or laboratory space. This program is not designed to provide money, equipment, or general information. (The application form on page 83 of this handbook may be duplicated.)

Scholarship Program

Over \$3.5 million in scholarships has been awarded to 2092 Chicago public school students who have participated in the Student Science Fair as exhibitors of projects and/or as Symposium participants.

Scholarships are awarded by corporations, individuals, philanthropic organizations, universities, and the Chicago Public Schools Student Science Fair, Inc. The number of available scholarships varies each year.

Any senior who has participated in at least one Chicago Public Schools Student Science Fair at either the Regional (area/district/network) or city level and/or the symposium, is graduating in June 2017 from a Chicago public high school, and is majoring in a STEM related field is eligible to apply for a scholarship.

Interested seniors may obtain scholarship application forms from their high school science fair coordinator, their senior counselor, or science department chairperson. (The application is also found in the Appendix of this handbook.) Applicants should be aware that a completed application with required documents is due on or before the March 23, 2017, deadline for receiving their applications. *Late and incomplete entries will not be considered and will be returned to the student. Faxed applications will not be accepted.*

Completed application forms will be judged on the following criteria:

- pursuing a major in a STEM related field
- amount of science fair participation, and level of achievement
- academic profile: type of courses and grades, class rank, and standardized test results
- personal essay
- letter of recommendation

Approximately 25 candidates will be selected and invited to meet with the Scholarship Committee in the final step of screening. Recipients of scholarships are selected by the committee to discuss their candidacy with the committee in an informal setting. The candidates are notified by letter as to the decision of the Scholarship Committee whose decisions are final. A formal presentation of scholarships takes place at an awards dinner to honor the recipients, their parents, and teachers.

The university scholarships listed below and on the following page were available to Chicago Public Schools Science Fair, Inc. at the time of publication. *The list is subject to change. See the Science Fair website for updates and changes.*

DePaul University

One renewable \$8,000 tuition-waiver scholarship
Requirements: ACT score of 22+
GPA of 3.0 or higher;
Class rank in top 20%

Illinois Institute of Technology

One renewable \$4,000 tuition-waiver scholarship
Requirement: Admission to IIT by April 1, 2017

Loyola University Chicago

One \$2,000 per year renewable tuition waiver
Requirements: Admission to Loyola by
April 1, 2017
ACT score 24+ or 30+ for the Honors Program
Class rank in upper 10%
Major in biology, chemistry, physics,
pre-medicine, or mathematics

Northeastern Illinois University

Two ½-year, tuition-free scholarships
Requirements:
ACT score 25+; Honors College admission
Class rank in upper 10%
Must have a valid social security number

The University of Chicago

One tuition waiver of \$2,000
Requirement: Accepted by the University by
April 1, 2017

University of Illinois at Chicago

One 4-year, tuition-free scholarship
Requirement: Admission to
UIC Honors College by April 1, 2017
Call 312.413.2260 for details regarding acceptance into
the Honors Program.

A number of monetary scholarships will be available. The funding of these scholarships depends on the generosity of corporations and philanthropic organizations that contribute to Chicago Public Schools Student Science Fair, Inc. Cash grants usually range from \$500 to \$5,000. (The application for a Science Fair Scholarship can be found on pages 85-87 of this handbook.)

CHECKLIST FOR THE PHYSICAL ARRANGEMENT OF THE SCIENCE PROJECT PAPER

(Abstract, Safety Sheet, Endorsements, & Research Summary)

ALL ITEMS MUST BE TYPED

ABSTRACT

- Included in paper and a copy must be displayed on front of display board
- Three (3) paragraphs with headings: Purpose, Procedure, and Conclusion
- Typed single-spaced, 200 words or less
- Check appropriate box - either Experimental or Design Investigation
- Exhibit number in the upper right corner if going to the city fair

SAFETY SHEET

- Included in paper and a copy must be displayed on front of display board
- Lists possible hazards, precautions described
- If no hazards were possible a statement indicating this is included
- Signed by student and sponsor
- Exhibit number in the upper right corner if going to the city fair

APPROPRIATE ENDORSEMENTS AND ATTACHMENTS (If applicable)

- Included in paper and a copy must be displayed on front of display board
- Endorsement signed and stamped by the Scientific Review committee member
- Signed by student and sponsor
- All pages of completed endorsement and proper documentation is attached, if necessary
- ISEF approval forms - if applicable
- Exhibit number in the upper right corner if going to the city fair

TITLE PAGE OF RESEARCH SUMMARY

- Formatted as on page 56 and indicate type of investigation either Experimental or Design
- Approval signed by both the sponsor and school coordinator
- Exhibit number in the upper right corner if going to the city fair

TABLE OF CONTENTS

- Project title and exhibitor's last name typed at the top left corner
- Pagination is accurate

ACKNOWLEDGMENTS

- Credit is given to those who have helped with the research

PURPOSE AND HYPOTHESIS

- States precisely what the investigation was attempting to discover
- Hypothesis is present

REVIEW OF LITERATURE

- Provides information that supports the hypothesis and if necessary, the procedure
- Provides adequate background information about the topic
- Use of third person is evident
- Logical and/or related grouping of information
- Accurate spelling, grammar, quotations and citations and page set-up
- Parenthetically cited.

MATERIALS AND METHODS OF PROCEDURE

- All equipment and materials are listed
- Drawings and photographs are present if they enhance and clarify the project
- Step-by-step, chronological procedures are present and replicable
- A control or comparison group is present and appropriate
- Number of trials within each test group is adequate
- Control of variables is evident

RESULTS

- All data is presented, including results inconsistent with the hypothesis, if applicable
- Data and calculations are clear and accurate
- Data is quantitative and correct units of measurement (metric) are used
- Data is organized into clear & informative tables or charts with accompanying graphs
- Effect of experimental error was estimated and considered

CONCLUSIONS

- Evaluation and interpretation of data is present
- Refers back to purpose and hypothesis
- Answers the original question
- Is valid and limited to the results of the experiment

REFERENCE LIST

- References in this list are actually cited in the paper
- References from a variety of at least 12 sources and are current (copyright within the last seven years)
- Reference list is alphabetical
- Proper APA format is used for all references
- Titled "Reference List" or "References Cited" not "Bibliography"

NUMBER OF PAPERS REQUIRED

- Nine (9) copies of the Science Project Paper are needed to register for the City Science Fair

OTHER REQUIREMENTS

- Science Project Paper clearly and concisely explains the project in short, simple sentences
- Project title & exhibitor's last name typed at top left corner of all pages after Table of Contents
- Typed double-spaced, one inch margins on all sides, single-sided
- All pages are numbered and referenced in the Table of Contents
- Standard type font and size (ex. Times New Roman 10 - 12 point font)
- Science Project Paper (Abstract, Safety Sheet, and Research Summary) is no more than 30 pages (33 if an endorsement is included)
- Paper is well typed, with correct spelling, grammar, punctuation and consistent point of view
- Indicate Experimental or Design Investigation on all forms and pages were required

(ALL ITEMS LISTED MUST BE TYPED).

ABSTRACT

The Illinois Junior Academy of Science

CATEGORY _____ STATE REGION # 3

SCHOOL _____ IJAS SCHOOL # 3001

CITY/ZIP _____ SCHOOL PHONE _____

SPONSOR _____

CHECK ONE: EXPERIMENTAL INVESTIGATION DESIGN INVESTIGATION

(Choice will determine rubric used for assessment)

NAME OF EXHIBITOR * _____ GRADE _____

NAME OF EXHIBITOR _____ GRADE _____

* If this project is awarded a monetary prize, the check will be written in this scientist's name and it will be his/her responsibility to distribute the prize money equally among all participating exhibitors.

PROJECT TITLE _____

1. Limit Abstract to 3 paragraphs (200 words or less). Include: a) Purpose– what you set out to investigate; b) Procedure – how you did it; c) Conclusion – based on your results. Label each paragraph.
2. Must be typed, single-spaced, on the front side of this form. DO NOT write on back side of this form.
3. Three (3) copies of your COMPLETE paper are required at the State Science Project Exposition. Four (4) copies of your COMPLETE paper are required for the State Paper Session Competition.

The above form must be duplicated. (Student-generated forms must be in essentially the same format.)

*This form **MUST** be displayed on the front of the exhibitor's display board. It may be reduced to fit on a half sheet of paper. (Print at 65% reduction)*

This Page Intentionally Left Blank

SAFETY SHEET

The Illinois Junior Academy of Science

Directions: The student is asked to read this introduction carefully, fill out the bottom of this sheet. The science teacher and/or advisor must sign in the indicated space. By signing this sheet, the sponsor assumes all responsibilities related to this project.

Safety and the Student: Experimentation or design may involve an element of risk or injury to the student, test subjects and to others. Recognition of such hazards and provision for adequate control measures are joint responsibilities of the student and the sponsor. Some of the more common risks encountered in research are those of electrical shock, infection from pathogenic organisms, uncontrolled reactions of incompatible chemicals, eye injury from materials or procedures, and fire in apparatus or work area. Countering these hazards and others with suitable controls is an integral part of good scientific research. In the **chart** below, list the principal hazards associated with your project, if any, and what specific precautions you have used as safeguards. Be sure to read the entire section in the *Policy and Procedure Manual of the Illinois Junior Academy of Science* entitled "Safety Guidelines for Experimentation" before completing this form.

Possible hazards	Precautions taken to deal with each hazard

Please check off any other possible endorsements needed. Include these documents in your paper and on your board.

- Human as Test Subjects –for any projects involving humans-even surveys.
- Microorganism-for any projects involving bacteria, viruses, yeasts, fungi or protozoa
- Non-Human Vertebrates -for any projects involving fish, amphibians, reptiles, birds or mammals
- Tissue Culture-for any projects involving growing eukaryotic tissues or cell cultures
- Recombinant DNA-must be conducted in a registered research laboratory under professional supervision
- Use of Firearms – including all required documents
- Letter from institution where research was done or IJAS SRC-if an exception to the IJAS rules has been granted.

REQUEST FOR HUMANS AS TEST SUBJECTS ENDORSEMENT

BEFORE beginning any project using humans as the subject of an experiment, students must obtain permission from the Scientific Review Committee and in some cases, from IJAS. Details about rules regarding the use of humans as test subjects are on pages 12-13 of the current Science Fair Handbook. Only projects that do not cause pain and suffering to humans will be allowed.

THESE RULES WILL BE STRICTLY ENFORCED FOR THE REGIONAL (NETWORK), CITY AND STATE SCIENCE EXPOSITIONS. NO REGIONAL (NETWORK) FAIR SHALL SEND A PROJECT TO THE CITY OR STATE EXPOSITION THAT DOES NOT MEET THESE REGULATIONS

1. Humans must not be subjected to treatments that are considered hazardous and/or that could result in undue stress, injury, or death to the subject.
2. NO primary or secondary cultures taken directly (mouth, throat, skin, etc) or indirectly (eating utensils, countertops, doorknobs, toilets, etc.) will be allowed. However, cultures obtained from reputable biological suppliers or research facilities are suitable for student use.
3. Quantities of food and non-alcoholic beverages are limited to normal serving amounts or less and must be consumed in a reasonable amount of time. Normal serving amounts must be substantiated with reliable documentation. This documentation must be attached to this endorsement request. No project may use over-the-counter, prescription, illegal drugs or alcohol in order to measure their effect on a person.
4. The only human blood that may be used is that which is obtained from a blood bank, hospital, or laboratory. No blood may be drawn by any person or from any person specifically for a science project. This rule does not preclude a student making use of data collected from blood tests not made exclusively for a science project.
5. Projects that involve exercise and its effect on pulse, respiration rate, blood pressure, and so on are allowed provided the exercise is not carried to the extreme. Electrical stimulation is not permitted. A valid, normal physical examination report must be on file for each test subject. Documentation of same must be attached to this endorsement.
6. Projects that involve learning, ESP, motivation, hearing, vision and surveys require the Humans as Test Subjects endorsement.

If the SRC determines that the proposed procedure involves discomforts or risks (physical, psychological, social, and/or legal) to the test subjects, each subject must sign an informed consent certification (see pp.95 - 96 of this handbook. If the subject is under 18 years of age, the permission of his/her legal guardian must be obtained before the subject may be involved in the experiment. The SRC will indicate next to the committee member's signature on this form whether the project requires the test subjects to provide informed consent.

EXCEPTIONS to the six rules above will not be allowed unless the student is working with a university, hospital or research facility on an ongoing research project being conducted by the institution and the following conditions are met. 1) The endorsement request is made before the SRC deadline of **October 15, 2016**, 2) The consulting scientist completes and signs the appropriate section of this request form and includes the required documentation and 3) The endorsement is granted before the student begins the experiment.

SPECIAL NOTE: Students in grades 9-12 wishing to participate at the International Science and Engineering Fair should consult pages 41-42 of this handbook for required forms. ISEF rules and forms are available at: http://www.societyforscience.org/isef/about/rules_regulations.asp.

Name of Student: _____ Student E-mail Address: _____

Student School ID number (8 digits): Print Name of Teacher-Sponsor _____

Teacher-Sponsor E-mail Address: _____

School: _____ GSR# _____ Date submitted: _____

If the proposed experiment or project is being conducted under the supervision of a professor or scientist at a university, hospital or research facility the following information must be submitted with this endorsement request on separate institution letter head. Due by October 15, 2016

1. Consultant's contact information:

Name of consulting professional: _____ Title: _____

Profession: _____ Position and name of Institution: _____

Phone number (extension if applicable): () _____ E-mail address: _____

2. A signed original letter on institute stationery that specifically describes the student's procedure and how the student will be supervised by the consultant throughout the experiment. The letter must also include the following statement indicating the consulting adult certifies he/she will provide necessary supervision.
3. A copy of your institution's Institutional Review Board approval that covers the scope of this work, whether original or part of an ongoing study.

"By signing this document I certify that I will directly train and supervise this student and take necessary precautions to avoid risk to the test subjects and to the student experimenter."

TWO COPIES OF THIS COMPLETED FORM MUST BE RECEIVED BY DR. ROSARIO CANIZALES AT IRENE HERNANDEZ MIDDLE SCHOOL GSR #45 BY November 15, 2016 (NO FAXED DOCUMENTS ACCEPTED)

Alternately, this endorsement request may be completed on-line at www.cssf.org; and may be saved, printed, signed, scanned and sent to humanvert8@gmail.com .

(Continued on page 64)

PAGE 2 of REQUEST FOR HUMANS AS TEST SUBJECTS ENDORSEMENT

Students and sponsors using humans as test subjects in a science project must complete this form. The signature of the student(s) and the sponsor indicate the project was done within the rules on the previous page. Failure to comply with these rules will mean disqualification of the project. This form must follow the Safety Sheet in the project research paper.

Title of Project: _____

Read and answer each of the following questions carefully so the Scientific Review Committee can fairly assess whether your project will be safe for your test subjects. Do NOT copy and attach the procedure from your research plan as a substitute.

1. Hypothesis or problem to be studied (include independent and dependent variables):

2. Briefly describe the proposed procedure, including the length of time in which human subject(s) will be involved.

3. Describe any potential risks or discomforts the subjects may endure in this procedure:

4. Describe what precautions will be taken to prevent or eliminate possible health hazards:

5. Anonymity of test subjects is mandatory. Describe how the identity of your test subjects will be concealed in the research paper and display board.

THE SIGNATURES OF THE SPONSOR AND THE STUDENT OR STUDENTS BELOW INDICATE THAT THE PROJECT CONFORMS TO THE ABOVE RULES OF CPS STUDENT SCIENCE FAIR AND OF THE ILLINOIS JUNIOR ACADEMY OF SCIENCE.

Sponsor Signature: _____ Sponsor Email address: _____

Student 1 Signature: _____ Student Email address: _____

Student 2 Signature: _____ Student Email address: _____

Date: _____

FOR SRC USE ONLY	The signature and stamp in blue ink indicate this project has been approved as safe	SRC Stamp:
	Scientific Review Committee Member:	
	Date of approval:	

SIGNATURE AND STAMP FROM THE SRC MUST BE ON THIS ENDORSEMENT BEFORE THIS PROJECT CAN BE EXHIBITED. THIS ENDORSEMENT MUST BE TYPED AND DISPLAYED ON THE FRONT OF THE EXHIBITOR'S DISPLAY BOARD. IT MAY BE REDUCED TO A HALF SHEET OF PAPER IF NECESSARY. (PRINT AT 65% REDUCTION)

CHECK BOX IF EXCEPTION/APPROVAL LETTER IS REQUIRED AND ATTACHED (SEE PAGE 14)

(Continued on page 65)

INFORMED CONSENT CERTIFICATION

MUST BE TYPED AND SUBMITTED WITH HUMAN AS TEST SUBJECTS ENDORSEMENT FORM
Please see page 12 of this handbook for details.

THIS FORM IS REQUIRED OF SOME PROJECTS INVOLVING HUMANS AS TEST SUBJECTS

Research Project Title: _____

A Purpose of the project: _____

B _____ Participants will be asked to:

C Possible discomforts or risks the subject(s) may reasonably expect through participation in this research:

If the experiment affects the pulse, respiration rate and/or blood pressure, I verify, a current valid physical examination is on file

D Procedures to be used to minimize risks: _____

E Possible benefits the test subject(s) might reasonably expect: _____

F Name and phone number of teacher/supervisor who can provide information regarding this research :

NAME EMAIL () AREA CODE PHONE NUMBER

AS A TEST SUBJECT:

I have read and understand the conditions stated above, that participation in this research procedure is completely voluntary. I am free to withdraw my consent and to discontinue participation in this research activity at any time without any negative consequences

Test Subject's Signature: _____ Date: _____

Parent's or guardian's signature if test subject is a minor (under age 18) or a protected special needs person.

Parent/Guardian's Signature: _____ Date: _____

If this research is under the supervision of a qualified scientist (not including the teacher or student):

Qualified Scientist's Signature: _____ Date: _____

Institution: _____

This Page Intentionally Left Blank

REQUEST FOR NON-HUMAN VERTEBRATE ANIMAL ENDORSEMENT

BEFORE beginning a project involving vertebrate animals, students must obtain permission from the Scientific Review Committee and in some cases, from IJAS. Details about rules regarding the use of non-human vertebrates are on pages 13-14 of the current Science Fair Handbook. Humane care and use must supersede all other considerations, including scientific merit, when animals are used in science projects.

THESE RULES WILL BE STRICTLY ENFORCED FOR THE REGIONAL (NETWORK), CITY AND STATE SCIENCE EXPOSITIONS. NO REGIONAL (NETWORK) FAIR SHALL SEND A PROJECT TO THE CITY OR STATE EXPOSITION THAT DOES NOT MEET THESE REGULATIONS.

1. The student and the sponsor have the responsibility to see that all animals have proper care in well-ventilated, properly lighted locations with proper nutrition, proper temperature, adequate water, and sanitary surroundings. Care must be taken to see that the organisms are properly cared for during weekends and vacation periods.
2. NO primary or secondary cultures involving warm-blooded animals taken directly (mouth, throat, skin, bone, etc) or indirectly (cage debris, droppings, etc.) will be allowed. However, cultures purchased from reputable biological supply houses or research facilities are suitable for student use.
3. No intrusive or pain-producing techniques may be used. Included in these techniques would be such things as surgery, injections, taking of blood, burning, electrical stimulation or giving of over-the-counter, prescription, illegal drugs or alcohol to measure their effect.
4. No changes may be made in an organism's environment that could result in undue stress, an injury, or death to the animal.
5. No vertebrates can be used as the independent or dependent variables in an experiment that could result in undue stress, an injury or death to the animal.
6. For maze running and other learning or conditioning activities, food or water cannot be withheld for more than 24 hours. If the animal has a high metabolic rate, then food or water cannot be withheld for a length of time that would produce undue stress on the animal.
7. Chicken or other bird embryo projects are allowed, but the treatment must be discontinued at or before 72 hours prior to the scheduled hatch day.
8. Projects that involve behavioral studies of newly-hatched chickens or other birds will be allowed if no changes have been made in the normal incubation and hatching of the organism, and that all vertebrate rules are followed.
9. Vertebrate research involving the manipulation of any aspect of a vertebrate animal's environment **MUST** be supervised by a research scientist who is a veterinarian, medical doctor or biological research scientist. The project will be disqualified without the required evidence of this supervision.

EXCEPTIONS to the rules above will not be allowed unless the student is working with a university, hospital or research facility on an ongoing research project being conducted by the institution and the following conditions are met. 1) The endorsement request is made before the SRC deadline of **October 15, 2016**, 2) The consulting scientist completes and signs the appropriate section of this request form and includes the required documentation and 3) The endorsement is granted before the student begins the experiment.

SPECIAL NOTE: Students in grades 9-12 wishing to participate at the International Science and Engineering Fair should consult pages 41-42 of this handbook for required forms. ISEF rules and forms are available at http://www.societyforscience.org/isef/about/rules_regulations.asp.

Name of Student: _____ Student E-mail Address: _____

Student School ID number (8 digits): Print Name of Teacher-Sponsor _____

Teacher-Sponsor E-mail Address: _____

School: _____ GSR# _____ Date submitted: _____

TO BE COMPLETED BY THE CONSULTING SCIENTIST

1. Consultant's contact information:

Name of consulting professional (veterinarian, doctor or biological researcher): _____ Title: _____

Profession _____ Position and name of Institution _____

Phone number (extension if applicable): () _____ E-mail address: _____

2. A signed original letter on institute stationery that specifically describes the student's procedure and how the student will be supervised by the consultant throughout the experiment. The letter must also include the following statement indicating the consulting adult certifies he/ she will provide necessary supervision AND RECEIVED BY October 15, 2016.

"By signing this document I certify that I will directly train and supervise this student and take necessary precautions to avoid risk to the test subjects and to the student experimenter."

3. A copy of your institution's Institutional Animal Care and Use Committee approval that covers the scope of this work, whether original or part of an ongoing study.

4. Signature of Consulting Scientist: _____ Date _____

TWO COPIES OF THIS COMPLETED FORM MUST BE RECEIVED BY MS. PAMELA SIMS, NETTELHORST ELEMENTARY, GSR #33 BY NOVEMBER 15, 2016

(NO FAXED DOCUMENTS ACCEPTED) This endorsement request must be completed on-line at www.cssf.org; and may be saved, printed, signed, scanned and sent to nonhumanvert8@gmail.com.

(Continued on page 68)

PAGE 2 of REQUEST FOR NON-HUMAN VERTEBRATE ENDORSEMENT

Students and sponsors doing a non-human vertebrate project must complete this form. Failure to comply with the rules on the previous page will mean disqualification of the project. This form must follow the Safety Sheet in the project research paper.

Type of Vertebrate Animal used: _____

Title of Project: _____

Read and answer each of the following questions carefully so the Scientific Review Committee can fairly assess whether your project will be safe for your test subjects. Do NOT copy and attach the procedure from your research plan as a substitute.

1. Hypothesis or problem to be studied (include independent and dependent variables)

2. Briefly describe the procedure (including the length of time) in which non-human vertebrate subject(s) will be involved.

3. Describe the housing and care to be provided to the animal(s). Include the cage/pen size, number of animals per cage, environment, bedding, type of food, frequency of food and water, how frequently the animal(s) will be observed, etc.

4. What will happen to the animal(s) after you have finished your experiment and project?

The signatures of the sponsor and the student or students below indicate that the project conforms to the above rules of CPS Student Science Fair and of the Illinois Junior Academy of Science.

Sponsor Signature: _____ Sponsor Email address: _____

Student 1 Signature: _____ Student Email address: _____

Student 2 Signature: _____ Student Email address: _____

Date: _____

FOR SRC USE ONLY	The signature and stamp in blue ink indicate this project has been approved as safe.	SRC Stamp:
	Scientific Review Committee Member:	
	Date of approval:	

SIGNATURE AND STAMP FROM THE SRC MUST BE ON THIS ENDORSEMENT BEFORE THIS PROJECT CAN BE EXHIBITED THIS ENDORSEMENT MUST BE TYPED AND DISPLAYED ON THE FRONT OF THE EXHIBITOR'S DISPLAY BOARD. IT MAY BE REDUCED TO A HALF SHEET OF PAPER IF NECESSARY (PRINT AT 65% REDUCTION).

CHECK BOX IF EXCEPTION/APPROVAL LETTER IS REQUIRED AND ATTACHED (SEE PAGE 14)

REQUEST FOR MICROORGANISM ENDORSEMENT

BEFORE beginning any project using microorganisms as the subject of an experiment, students must obtain the approval of the Scientific Review Committee. All microorganisms used, including those listed on page 77 require a Request for a Microorganism Endorsement. Details about rules regarding the use of microorganisms and Bio-safety level 1 are on pages 15-17 of the current Science Fair Handbook.

THESE RULES WILL BE STRICTLY ENFORCED FOR THE REGIONAL (NETWORK), CITY AND STATE SCIENCE EXPOSITIONS. NO REGIONAL (NETWORK) FAIR SHALL SEND A PROJECT TO THE CITY OR STATE EXPOSITION THAT DOES NOT MEET THESE REGULATIONS.

1. This area of science may involve many dangers and hazards while experimenting. It is the sole responsibility of all teacher/sponsors to teach students proper safety methods and sterile techniques before the student may begin any project involving microorganisms.
2. The use of primary or secondary cultures taken from humans or other vertebrate animals in any project is prohibited because of the danger from unknown viruses or other disease-causing agents that may be present. This includes but is not limited to, those taken directly from the skin, throat, mouth, etc. or indirectly – eating utensils, doorknobs, toilets, countertops, etc. Pure cultures of microorganisms known to inhabit vertebrate animals may be obtained from reputable suppliers and used in proper settings.
3. Microbiology experiments must be conducted in an appropriate laboratory, whether at school or a research facility. Only research on bakers yeast may be done in a student's home and these cultures must be incubated at or below room temperature.
4. Projects involving viruses should be done with the help of a professional and should comply with the National Institutes of Health Guidelines unless the project is limited to a kit obtained from a legitimate supply house.
5. All cultures must be destroyed using proper disposal methods. Example using an autoclave or with a 10% NaOCl (Chlorine bleach) solution before disposal.

EXCEPTION - Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by October 15, 2016.**

SPECIAL NOTE: Students in grades 9-12 wishing to participate at the International Science and Engineering Fair should consult pages 41-42 of this handbook for required forms. ISEF rules and forms are available at <http://www.societyforscience.org/Page.aspx?pid=312>

Name of Student: _____ Student E-mail Address: _____

Student School ID number (8 digits): Print Name of Teacher-Sponsor _____

Teacher-Sponsor E-mail Address: _____

School: _____ GSR# _____ Date submitted: _____

If the proposed experiment or project is being conducted under the supervision of a professor or scientist at a university, hospital or research facility the following information must be submitted with this endorsement request on separate institution letter head. Due by October 15 2016.

1. Consultant's contact information:

Name of consulting professional (veterinarian, doctor or biological researcher): _____

_____ Title: _____

Profession _____ Position and name of Institution _____

Phone number (extension if applicable): () _____ E-mail address: _____

2. A signed original letter on institute stationery that specifically describes the student's procedure and how the student will be supervised by the consultant throughout the experiment. The letter must also include the following statement indicating the consulting adult certifies he/she will provide necessary supervision.

PLEASE INCLUDE THE FOLLOWING STATEMENT IN THE LETTER

"By signing this document I certify that I will directly train and supervise this student and take necessary precautions to prevent risk and exposure to potentially infectious materials involved in this project."

Additionally, please have the consultant indicate in the letter which of the following options apply to this project.

- a. This project was reviewed and approved by an Institutional Biosafety Committee (IBC) before experimentation or is part of an approved ongoing study. A copy of the approval is on file at the institution and will be made available if necessary.
- b. This institution does not require approval for this type of study. The student has received proper training in the safe use and proper methods of disposal of the potentially hazardous biological agents involved in this project.

TWO COMPLETED COPIES OF THIS FORM MUST BE RECEIVED BY JEANETTE BARTLEY, LINDBLOM MATH & SCIENCE ACADEMY, GSR #43 BY November 15, 2016. (See above Exception) (NO FAXES ACCEPTED)

Alternately, this endorsement request may be completed on-line at www.cssf.org; and may be saved, printed, signed, scanned and sent to microorg8@gmail.com.

(Continued on page 70)

PAGE 2 of REQUEST FOR MICROORGANISM ENDORSEMENT

Students and sponsors using microorganisms in a science project must complete this form. **Students must submit a Request for Microorganism Endorsement to the Scientific Review Committee for all organisms even those listed on page 77.** The signature of the student(s) and the sponsor indicate the project was done within the rules on the previous page. Failure to comply with these rules will mean disqualification of the project at the state level. This form must also be included in the project research paper following the Safety Sheet.

Read and answer each of the following questions carefully so the Scientific Review Committee can fairly assess whether your project will be safe. Do NOT copy and attach the procedure from your research plan as a substitute.

Title of Project: _____

Read and answer each of the following questions carefully so the Scientific Review Committee can fairly assess whether your project will be safe for your test subjects. Do NOT copy and attach the procedure from your research plan as a substitute.

1. Hypothesis or problem to be investigated: _____

2. Scientific name (and subspecies) of microorganism used in experiment (i.e. *E. coli* RI): _____

3. Where the experiment will be conducted: _____

4. Name of adult supervising project: _____

5. Briefly describe the experimental procedure for the student's project: _____

6. Describe how microorganisms and materials will be properly disposed of and/or sterilized. See p.15-16 for details before filling out. _____

7. Describe the safety precautions that all participants will follow while conducting this experiment in order to minimize potential exposure or harm (i.e. gloves, safety goggles, and lab coat will be worn at all times, all equipment will be sterilized using an autoclave, etc.) See p. 15-16 for details before filling out. _____

8. Which of the following best describes your level of experience with microbiology?

I have no training in microbiology

I have general training in microbiology and aseptic technique

I am trained or certified to handle microorganisms such as *Salmonella choleraesuis*, *Streptococcus pneumoniae*, etc.

9. Signature of supervising adult: _____

The signatures of the sponsor and the student or students below indicate that the project conforms to the above rules of CPS Student Science Fair and of the Illinois Junior Academy of Science.

Sponsor Signature: _____ Sponsor Email address: _____

Student 1 Signature: _____ Student Email address: _____

Student 2 Signature: _____ Student Email address: _____

Date: _____

FOR SRC USE ONLY	The signature and stamp in blue ink indicate this project has been approved as safe.	SRC Stamp:
	Scientific Review Committee Member:	
	Date of approval:	

SIGNATURE AND STAMP FROM THE SRC MUST BE ON THIS ENDORSEMENT BEFORE THIS PROJECT CAN BE EXHIBITED. THIS ENDORSEMENT MUST BE TYPED AND DISPLAYED ON THE FRONT OF THE EXHIBITOR'S DISPLAY BOARD. IT MAY BE REDUCED TO A HALF SHEET OF PAPER IF NECESSARY (PRINT AT 65% REDUCTION).

CHECK BOX IF EXCEPTION/APPROVAL LETTER IS REQUIRED AND ATTACHED (SEE PAGE 14)

REQUEST FOR HUMAN OR VERTEBRATE TISSUE ENDORSEMENT

BEFORE beginning any project using of human and vertebrate tissue in an experiment, students must obtain permission from the Scientific Review Committee and in some cases, from ISEF. Details about rules regarding the use of vertebrate tissue are on page 16 of the current Science Fair Handbook.

THESE RULES WILL BE STRICTLY ENFORCED FOR THE REGIONAL (NETWORK), CITY AND STATE SCIENCE EXPOSITIONS. NO REGIONAL (NETWORK) FAIR SHALL SEND A PROJECT TO THE CITY OR STATE EXPOSITION THAT DOES NOT MEET THESE REGULATIONS.

1. For the purpose of student research, all body fluids (blood, saliva, & urine), bone, skin, hair, and teeth are considered tissue.
2. Students may do research on fresh tissue, organs, primary cell cultures, established cell and tissue cultures, eggs, meat or meat by-products including bone obtained from biological supply houses, food stores, restaurants, or packing houses.
3. Teeth used in a research project must be sterilized. A written statement from a dentist to this effect must accompany this request.
4. The only blood that may be used is that which is purchased or obtained from a blood bank, hospital, or laboratory. No blood may be drawn by or from any person specifically for a Science Fair project.
5. All tissue should be handled as though it were potentially infectious.
6. All tissue studies must be conducted under adult supervision.

EXCEPTION - Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning – **must be received by October 15, 2016.**

SPECIAL NOTE: Students in grades 9-12 wishing to participate at the International Science and Engineering Fair should consult pages 41-42 of this handbook for required forms. ISEF rules and forms are available at: http://www.societyforscience.org/isef/about/rules_regulations.asp.

Name of Student: _____ Student E-mail Address: _____

Student School ID number (8 digits): Print Name of Teacher-Sponsor _____

Teacher-Sponsor E-mail Address: _____

School: _____ GSR# _____ Date submitted: _____

If the proposed experiment or project is being conducted under the supervision of a professor or scientist at a university, hospital or research facility the following information must be submitted with this endorsement request on separate institution letter head. Due by October 15, 2016.

1. Consultant's contact information:

Name of consulting professional:

_____ Title: _____

Profession _____ Position and name of Institution _____

Phone number (extension if applicable): () _____ E-mail address: _____

2. A signed original letter on institute stationery that specifically describes the student's procedure and how the student will be supervised by the consultant throughout the experiment. The letter must also include the following statement indicating the consulting adult certifies he/she will provide necessary supervision.

PLEASE INCLUDE THE FOLLOWING STATEMENT IN THE LETTER

"By signing this document I certify that I will directly supervise this student and take necessary precautions to prevent risk and exposure to potentially infectious materials involved in this project."

Additionally, please have the consultant indicate in the letter which of the following options apply to this project.

- a. This project was reviewed and approved by an Institutional Biosafety Committee (IBC) before experimentation or is part of an approved ongoing study. A copy of the approval is on file at the institution and will be made available if necessary.
- b. This institution does not require approval for this type of study. The student has received proper training in the safe use and proper methods of disposal of the potentially hazardous biological agents involved in this project.

TWO COPIES OF THIS COMPLETED FORM MUST BE RECEIVED BY November 15, 2016 BY: JENNIFER PATUSH, CURIE HIGH SCHOOL, GSR #37

(NO FAXES ACCEPTED)

Alternately, this endorsement request may be completed on-line at www.cssf.org; and may be saved, printed, signed, scanned and sent to humverttissue8@gmail.com.

(Continued on page 72)

PAGE 2 of REQUEST FOR HUMAN OR VERTEBRATE TISSUE ENDORSEMENT

Students and sponsors using vertebrate tissue in a science project must complete this form. The signature of the student(s) and the sponsor indicate the project was done within the rules on the previous page. Failure to comply with these rules will mean disqualification of the project. This form must follow the Safety Sheet in the project research paper.

Title of Project: _____

Tissue/Organ to be used: _____

Complete the following information to show source where the tissue/organ will be obtained:

IF OBTAINED FROM A SUPPLY HOUSE	IF OBTAINED FROM A UNIVERSITY, HOSPITAL, OR RESEARCH LAB
NAME OF SUPPLY HOUSE _____	NAME OF INSTITUTION _____
ITEM CATALOG NUMBER _____	NAME OF PROVIDER OF TISSUE _____
SUPPLY HOUSE WEBSITE _____	TITLE/PROFESSION _____

REQUEST FOR RECOMBINANT DNA ENDORSEMENT

BEFORE beginning any project that involves cutting and splicing segments of DNA that would not normally occur together, students must obtain the approval of the Scientific Review Committee and in some cases, from IJAS. Details about rules regarding the use of recombinant DNA and Biosafety level 1 are on pages 15-17 of the current Science Fair Handbook.

THESE RULES WILL BE STRICTLY ENFORCED FOR THE REGIONAL (NETWORK), CITY AND STATE SCIENCE EXPOSITIONS. NO REGIONAL (NETWORK) FAIR SHALL SEND A PROJECT TO THE CITY OR STATE EXPOSITION THAT DOES NOT MEET THESE REGULATIONS.

1. All research involving recombinant DNA techniques must meet the requirements of the National Institute of Health Guidelines for Research Involving Recombinant DNA Molecules.
2. All studies must be conducted in a registered research laboratory under the guidance of a biomedical scientist approved to conduct such studies by an appropriately constituted and registered bio-safety committee.
3. The research project being investigated must have the approval of a biomedical scientist or the laboratory's IBC where necessary
4. Propagation of recombinants containing DNA coding for oncogenes or other human, plant or animal toxins (including viruses) are prohibited.

SPECIAL NOTE: Students in grades 9-12 wishing to participate at the International Science and Engineering Fair should consult pages 41-42 of this handbook for required forms. ISEF rules and forms are available at <http://www.societyforscience.org/Page.aspx?pid=312>

Does this project involve the cutting and splicing of DNA segments that would not normally occur together? YES NO

If **YES**, you need an endorsement in order to participate in the CPS Science Fair. **Endorsement is due October 15, 2016.**

If **NO**, your project does not involve recombinant DNA. You don't need an endorsement before beginning your experiment.

Name of Student: _____ Student E-mail Address: _____

Student School ID number (8 digits):

--	--	--	--	--	--	--	--

PAGE 2 of REQUEST FOR RECOMBINANT DNA ENDORSEMENT

Students and sponsors using recombinant DNA in a science project must complete this form. The signature of the student(s) and the sponsor indicate the project was done within the rules on the previous page. Failure to comply with these rules will mean disqualification of the project at the city level. This form must follow the Safety Sheet in the project research paper

Title of Project: _____

THE INFORMATION BELOW MUST BE COMPLETED BY THE ADULT WHO WILL BE SUPERVISING THE STUDENT'S PROJECT
Please attach additional pages if necessary

1. Hypothesis or problem to be investigated (include independent and dependent variables): _____

2. Briefly describe the experimental procedure for the student's project: _____

3. Identify ANY potentially hazardous biological agents that will be used in this experiment (Examples: rDNA, bacteria, viruses, etc. and their sources)

4. Describe how all cultured materials and potentially hazardous waste will be properly disposed of and/or sterilized:

5. Describe the safety precautions that all participants will follow while conducting this experiment in order to minimize potential exposure or harm (Examples: gloves, safety goggles, and lab coat will be worn at all times, all equipment will be sterilized using an autoclave, etc.): _____

Name of supervising adult: _____ Signature of supervising adult: _____

The signatures of the sponsor and the student or students below indicate that the project conforms to the above rules of CPS Student Science Fair and of the Illinois Junior Academy of Science.

Sponsor Signature: _____ Sponsor Email address: _____

Student 1 Signature: _____ Student Email address: _____

Student 2 Signature: _____ Student Email address: _____

Date: _____

FOR SRC USE ONLY	The signature and stamp in blue ink indicate this project has been approved as safe.	SRC Stamp:
	Scientific Review Committee Member:	
	Date of approval:	

SIGNATURE AND STAMP FROM THE SRC MUST BE ON THIS ENDORSEMENT BEFORE THIS PROJECT CAN BE EXHIBITED. THIS ENDORSEMENT MUST BE TYPED AND DISPLAYED ON THE FRONT OF THE EXHIBITOR'S DISPLAY BOARD. IT MAY BE REDUCED TO A HALF SHEET OF PAPER IF NECESSARY (PRINT AT 65% REDUCTION).

CHECK BOX IF EXCEPTION/APPROVAL LETTER IS REQUIRED AND ATTACHED (SEE PAGE 14)

REQUEST FOR USE OF FIREARMS ENDORSEMENT

This form must be typed and submitted and acted upon before any demonstration or experimentation can begin.

BEFORE beginning any project using firearms, students must obtain permission from the Safety Committee. Details about rules and regulations regarding the use of firearms are on pages 18 and 19 of the 2017 Science Fair Handbook. Only projects that do confirm to all the rules and regulations and have prior permission will be allowed.

THESE RULES WILL BE STRICTLY ENFORCED FOR ALL LEVELS OF SCIENCE FAIR COMPETITION.

- A. For purposes of participating in programs sponsored by the Chicago Public Schools Student Science Fair, Inc., demonstrations or experiments involving: 1) the use of explosives of any type whatsoever (including, but not limited to black powder and gunpowder); or 2) the use of any air gun, firearm or black powder gun, is absolutely forbidden except when advance permission is obtained from the Chicago Public Schools Student Science Fair, Inc. to utilize an air gun or firearm only as stated in this paragraph below. Notwithstanding the prohibition set forth above, a student may make application to the Chicago Public Schools Student Science Fair, Inc. for advance permission to conduct a demonstration or an experiment utilizing an air gun or firearm only. The Chicago Public Schools Student Science Fair, Inc. may, at its sole discretion, deny permission if it has any concern whatsoever for safety related to the demonstration or experiment. Additionally, an experiment will be approved only if all of the following conditions are met at all times:
- 1) the student may not possess, handle or utilize any air gun or firearm at any time for conducting the demonstration or experiment for a science fair project; and the student and all bystanders, if present during the demonstration or experiment, must be behind a ballistic shield and wear eye and ear protection; the student is responsible for all items listed on the Checklist of the Physical Arrangement of the Science Project Paper on pages 57 and 58 of the 2017 Science Fair Handbook;
 - 2) the air gun or firearm must be handled at all times and the demonstration or experiment must be directly conducted at all times by a person over 21 years of age who is certified as a police officer by the Illinois Law Enforcement Training and Standards Board or by a person himself or herself licensed as a Private Detective or Private Security Contractor and in possession of a currently valid Firearms Control Card issued by the Illinois Department of Financial and Professional Regulation ("IDFPR") (Note: a Concealed Carry License issued by the Illinois State Police SHALL NOT SUFFICE, and a Permanent Employee Record Card "PERC" issued by the IDFPR SHALL NOT SUFFICE);
 - 3) the police officer or IDFPR-licensed professional conducting and supervising the demonstration or experiment must provide a written statement describing the demonstration or experiment in detail, provide a copy of all of his or her credentials, and certify under the police officer's or IDFPR-licensed professional's signature that the demonstration or experiment is safe to all persons involved; and explain why and how the demonstration or experiment is safe to all persons involved to the satisfaction of Chicago Public Schools Student Science Fair, Inc.; (**Copy of current FOID and Police Credentials, or Firearms Control Card must be attached to the request form.**)*
 - 4) the police officer or IDFPR-licensed professional supervising the demonstration or experiment must provide a Certificate of Liability Insurance in the amount of no less than \$1,000,000.00 naming the Chicago Public Schools Student Science Fair, Inc. as "ADDITIONAL INSURED"; the facility where the demonstration or experimentation will be conducted must be recognized by the Illinois State Police and will be required to provide a Certificate of Liability Insurance in the amount of \$1,000,000.00 naming the Chicago Public Schools Student Science Fair, Inc., as "ADDITIONAL INSURED";
 - 5) the student, parent, guardian, police or professional supervisor, and all persons present during the conduct of the demonstration or experiment must provide a release of liability for the benefit of, and in a form agreeable to, the Chicago Public Schools Student Science Fair, Inc., such form shall be provided when the student is granted permission to conduct the demonstration or experiment;
 - 6) the demonstration or experiment must not involve the hand loading or reloading of ammunition and may not utilize any black powder or muzzle loading gun;
 - 7) any demonstration or experiment involving a firearm must utilize at all times commercially-loaded fixed cartridge ammunition manufactured according to SAAMI standards;
 - 8) the air gun or firearm utilized must be commercially-manufactured and may not be older than fifty (50) years of age;
 - 9) the demonstration or experiment shall not involve making or testing modifications or alterations to the air gun or firearm itself;
 - 10) all local, municipal, state and federal laws and regulations must be strictly adhered to at all times;
 - 11) no air guns, firearms or ammunition can be present at any level of science fair (school science fair, Network Regional Science Fair, City Science Fair, IJAS and ISEF).
- B. Any advance permission issued shall be valid to conduct demonstrations or experiments for a period of thirty (30) days following approval, after which further demonstrations or experiments may not be conducted unless the advance permission is renewed or separate advance permission for a new or different demonstration or experiment is given.

If the Safety Committee determines that all condition set forth as mentioned above are not met, the Request for Firearms will be denied. If the Safety Committee finds that all conditions have been met the student will receive a Release of Liability Form for all persons present when the science fair project is conducted to be completed and submitted to the Safety Committee prior to exhibition at a science fair. If participants are under 18 years of age, the permission of his/her legal guardian must be obtained before the subject may be involved in the demonstration or experiment.

NO EXCEPTIONS are allowed to the above set requirements. Requests must be sent in and approved prior to the beginning of the science fair project. No Requests for Use of Firearms will be accepted for approval after October 31, 2016.

Name of Student: _____ Student E-mail Address: _____

Student School ID number (8 digits): Print Name of Sponsor _____

Sponsor E-mail Address: _____

School: _____ GSR# _____ Date submitted: _____

This proposed demonstration or experiment must be conducted by a person over 21 years of age who is certified as a police officer by the Illinois Law Enforcement Training and Standards Board or by a person himself or herself licensed as a Private Detective or Private Security Contractor and in possession of a currently valid Firearms Control Card issued by the Illinois Department of Financial and Professional Regulation ("IDFPR") (Note: a Concealed Carry License issued by the Illinois State Police SHALL NOT SUFFICE, and a Permanent Employee Record Card "PERC" issued by the IDFPR SHALL NOT SUFFICE); all of the following information must be submitted with the Request for Use of Firearms and submitted by October 31, 2016.

1. Licensed Professional contact information:

Name of professional: _____ Title: _____
Profession _____ Position and name of Institution _____
Phone number (extension if applicable): _____ E-mail address: _____

2. A signed original letter that specifically describes the student's project and how the licensed professional will be involved in conducting the demonstration or experiment. The letter must also include the following statement indicating that you certify that you are a current holder of a FOID card and/or a IDFPR card and will submit a copy with this letter. *This letter must also indicate that you will be submitting a copy of Certificate of Liability Insurance as outlined in Statement 4 of this Request Form.

PLEASE INCLUDE THE FOLLOWING STATEMENT IN THE LETTER

"By signing this document I certify that I will directly conduct the demonstration or experiment using the firearm and will supervise the student and all persons present on site to prevent risk and exposure to potentially hazardous materials and equipment involved in this project.

TWO COPIES OF THIS COMPLETED FORM MUST BE RECEIVED BY MELANIE WOTULEWICZ, CPS Student Science Fair, JOHN C. DORE ELEMENTARY, 6108 SOUTH NATOMA, CHICAGO, IL 60638 (Via CPS only - GSR #44 By October 31, 2016. (PLEASE DO NOT FAX DOCUMENTS)

PAGE 2 of REQUEST FOR USE OF FIREARMS ENDORSEMENT

Students whose projects involve the use of a firearm and sponsors using firearms in a science project must complete this form. **Students must submit a Request for Use of Firearms to the Safety Review Committee, before any demonstration or experimentation can begin.** The signature of the student(s) and the sponsor indicate the project will be done within the rules and regulations on the previous page and as found listed in the 2017 Science Fair Handbook on pages 18 - 19. Failure to comply with these rules will mean disqualification of the project at any level. This form must also be included in the project research paper following the Safety Sheet.

Read and answer each of the following questions carefully so the Safety Review Committee can fairly assess whether your project will be safe and in compliance with all the rules and regulations.

Title of Project: _____

1. Hypothesis or problem to be investigated: _____

2. Give full name, address, phone number and owner's name of licensed facility where firearms will be used: _____

Facilities License # _____ -(Copy must be attached to this request.)

Copy of Certificate of Liability Insurance must be attached to this request naming Chicago Public School Student Science Fair, Inc, as "ADDITIONAL INSURED" for the amount of \$1,000,000.00

3. Name of the adult professional using the firearm and supervising project: _____

Address: _____ Phone Number: _____ Email _____

FOID Card Number: _____ Expiration Date: _____

Firearms Control Card Number: _____ Expiration Date _____
(Copy of current FOID and Police Credentials, or Firearms Control Card must be attached to the request form.)

Copy of Certificate of Liability Insurance must be attached to this request naming Chicago Public School Student Science Fair, Inc, as "ADDITIONAL INSURED" for the amount of \$1,000,000.00

4. Model and caliber of firearm being used: _____

Owner of firearm: _____ FOID Card # _____

Type of ammunition being used in the firearm listed above: _____

5. Procedures: Describe in detail the demonstration or experiment that will take place using the firearm along with the type of data that will be collected after the completion of this demonstration or experiment. Please attached additional pages if needed: _____

6. Cite specifically how this demonstration or experiment relates to the CPS science curriculum and relates to the Next Generation Science Standards: _____

7. Describe the safety precautions that all participants will follow while conducting this experiment in order to minimize potential hazards or harm: _____

9. Signature of licensed professional: _____ Date: _____

The signatures of the sponsor and the student or students below indicate that the project conforms to the above rules of CPS Student Science Fair and of the Illinois Junior Academy of Science.

Sponsor Signature: _____ Sponsor Email address: _____

Student 1 Signature: _____ Student Email address: _____

Student 2 Signature: _____ Student Email address: _____ Date: _____

FOR SRC USE ONLY	The signature and stamp in blue ink indicate this project has been approved as safe.	SRC Stamp:
	Safety Review Committee Member:

REQUEST FOR MICROORGANISM ENDORSEMENT REQUIRED FOR ALL MICROORGANISMS FOR SCIENCE PROJECTS

Students and sponsors using microorganisms in a science project must complete a Request for Microorganism Endorsement and receive approval from the Scientific Review Committee even if the microorganism used is listed below. The following organisms (bacteria and fungi) are recommended for use by students doing science projects. These organisms are not pathogenic to plants or humans. Likewise, archaeobacteria, cyanobacteria, lichens and slime molds in pure culture that are available from biological supply houses to elementary and high schools do not pose a danger to plants or humans. Most protozoans and all green algae except Prototheca and Pfiesteria are also safe to use and require an endorsement. They are readily available in pure culture from most biological supply houses. Most supply houses will provide culture information about the bacteria as well as their type and gram stain. Be sure to use only **Biosafety Level 1** organisms. Projects involving viruses should be done in a professional research facility under the direct supervision of a professional researcher.

Acetobacter aceti	Flavobacterium capsulatum
Aquaspirillum intersonii	Lactobacillus acidophilus
Aquaspirillum serpens	Lactobacillus casei
Aquaspirillum sinuosum	Micrococcus luteus
Arthrobacter globiformis	Micrococcus roseus
Aspergillus niger	Penicillium notatum
Azotobacter chroococcum	Rhizobium leguminosarum
Azotobacter vinelandii	Rhizopus stolonifer
Bacillus brevis	Rhodospirillum rubrum
Bacillus cereus mycoides	Saccharomyces cerevisiae
Bacillus coagulans	Saprolegnia
Bacillus megaterium	Sordaria fimicola
Bacillus sphaericus	Spirillum volutans
Bacillus stearothermophilus	Streptococcus lactis
Bacillus subtilis	Streptococcus salivarius
Brevibacterium linens	Streptomyces albus
Caulobacter vibrioides	Streptomyces griseus
Clostridium butyricum	Streptomyces venezuelae
Corynebacterium xerosis	Streptomyces violaceus
Enterobacter aerogenes	Thiobacillus thioparus
Enterobacter cloacae	Vibrio fischeri
Escherichia coli (only Biosafety Level 1 strains)	

The student and the sponsor have the ultimate responsibility for the safety of the student while conducting experiments. All project development and experimentation should only be conducted under proper supervision and with safe methods of handling and disposal of biological cultures.

It is the sole responsibility of all teachers/sponsors to teach students proper safety methods and sterile techniques when working with bacteria. **Cultures taken from humans, other vertebrate animals or from sources that may indirectly harbor these bacteria (eating utensils, doorknobs, toilet seats, countertops, etc) MAY NOT be used.** Students are not allowed to isolate known bacteria from wild cultures above room temperature. Cultures may not be displayed at any exhibition.

All cultures should be destroyed by methods such as autoclaving or sanitizing with suitable NaClO (bleach) solution, 70% ethyl or isopropyl alcohol before disposal. Dispose of cultures and exposed materials by autoclaving at 121°C for 20 minutes. Dispose of sealed vials of freeze-dried material by dry heat sterilization at 170°C for four hours.

Contact the Scientific Review Committee member listed on the microorganisms endorsement request if you are unsure about whether your organism and/or procedure falls within the rules of acceptable research.

For a complete explanation of Biosafety level 1 go to Section IV of the Center for Disease Control's Biosafety in Microbiological and Biomedical Laboratories at http://www.cdc.gov/biosafety/publications/bmbL5/BMBL5_sect_IV.pdf.

APPLICATION FOR MINI RESEARCH GRANT (For Grades 7–12 Only)

Name of Student: _____ Age _____ Grade _____

Home Address: _____ Chicago, IL Zip Code: _____

Home Phone: () _____ email: _____

School: _____ CPS Area: _____ GSR# _____

Name of Teacher-Sponsor (*please print*): _____

Teacher-Sponsor Email or phone: _____

Title of Project: _____

If applying before testing your hypothesis to be pre-approved for reimbursement of the cost of materials

- Attach a copy of your project title, purpose and hypothesis, review of literature, materials and procedure and endorsement(s) if applicable.

Projects not yet completed will be evaluated according to the following criteria:

- Does the project have a basic theme that merits investigation?
 Is the project appropriate for the grade level of the student?
 Does the experiment conform to all the criteria below?

Purpose and Hypothesis

- States precisely what the investigation is attempting to discover
 Hypothesis is present

Review of Literature

- Provides information that supports the hypothesis and if necessary, the procedure
 Provides adequate background information about the topic
 Logical and/or related grouping of information
 Accurate spelling, grammar, quotations and citations

Materials and Procedure

- All apparatus and materials are listed
 Step-by-step, chronological procedures are present and replicable
 The control or comparison group is appropriate
 Number of trials within each test group is adequate
 The control of variables is evident
 The type of data to be collected and units of measure are specified and appropriate

Endorsement(s) if applicable

- Signed and stamped by the Scientific Review committee
 Includes all necessary attachments

Reference List

- References are from a variety of scientific sources published within the last 7 years
 References on this list are cited within the review of literature

(Continued on page 80)

PAGE 2 of APPLICATION FOR MINI RESEARCH GRANT

If applying after your school science fair for reimbursement of the cost of materials

- Attach a copy of your final Science Project Paper as described on p. 57 - 58, including endorsement(s) if applicable.
- Attach receipts for experiment materials if applying after your school science fair.

Completed projects will be evaluated according to these additional criteria as well as those above.

Results

- All data is presented, including results inconsistent with the hypothesis, if applicable
- Data and calculations are clear and accurate
- Data is quantitative and correct units of measurement (metric) are used
- Data is organized in clear & informative tables and graphs

Conclusion

- Evaluation and interpretation of data is present
- Refers to purpose and hypothesis
- Answers the original research question
- Is valid and limited to the results of the experiment

List the materials needed for the investigation **that cannot be provided by the school** and that may be purchased with the Mini Research Grant. State the cost of each item and the total amount requested. **(Non-consumable materials remain the property of Chicago Public Schools Student Science Fair, Inc., and are to be returned to the school at the completion of the investigation so that students may use these items for future research projects.)** Attach additional pages if needed.

Note: Materials to construct your project display board can not be requested for this grant funding.

QUANTITY	DESCRIPTION OF ITEM(S)	COST OF EACH	EXTENSION

CHICAGO PUBLIC SCHOOLS STUDENT SCIENCE FAIR, INC.
SCHOLARSHIP APPLICATION FORM

Due Date: March 23, 2017

INSTRUCTIONS: Check the appropriate box after completing each section. Only high school seniors who will graduate from a Chicago public high school this school year and who have participated or are now participating in the Chicago Public Schools Student Science Fair at the Area (Network, Regional) level or City Fair may apply. **Students must intend to major in a STEM related field.**

**ATTACH A
RECENT (2017)
PHOTOGRAPH
HERE**

- 1. Attach a recent black-and-white or color photo photograph of yourself in the space provided to the right.
- 2. Complete, have a parent/guardian sign, and return a **Consent Form and Release**. A copy of this form can be found on pages 97-99 of the *2017 Science Fair Handbook*.
- 3. Print, type, or word process the information on this form. Illegible or incomplete applications will not receive consideration.
- 4. This application must be accompanied by an **official transcript**. Transcripts and accompanying data **must**:
 - a. Differentiate among regular, honors, and advanced placement courses.
 - b. Include first semester 12th-grade classes and grades.
 - c. Designate actual or approximate class rank and grade point average.
 - d. Show 11th-grade standardized test scores (a minimum of one test score; for example, ACT or SAT).
- 5. Include one letter of recommendation from one of your science or mathematics teacher(s). The letter of recommendation should contain specific comments about your individual achievements, your unique abilities in the areas of science and/or mathematics; and how likely you are to pursue a career in math or science.
- 6. Attach to this application a personal essay which addresses the following questions:
 - (1) How have science and the science fair influenced your life?
 - (2) Where will science take you in the future?
 Observe the following guidelines:
 - a. The personal essay shall be between 200 and 400 words in length.
 - b. Letter size 8½" X 11" paper should be used. Essays must be typed.
 - c. Each page should be numbered and the student's last name should appear in the top left margin.
- 7. **ALL ITEMS ARE TO BE SENT TOGETHER IN ONE PACKAGE.**

16. Describe your most recent science project.

The number of monetary scholarships and grants depends upon the generosity of corporations and philanthropic organizations that contribute to Chicago Public Schools Student Science Fair, Inc. Available scholarships are subject to change. See the Science Fair Website for updates and changes

Check any of the scholarships below for which you want to be considered. You must be accepted by the university in order to be awarded that scholarship.

- Cash Grants ranging from \$500 to \$5,000**
- DePaul University**
One renewable \$8,000 tuition-waiver scholarship Requirements: ACT score of 22+ GPA of 3.0 or higher; Class rank in top 20%
- Illinois Institute of Technology** – One \$4,000 per year renewable tuition waiver scholarship. Requirement: Admission to IIT by April 1, 2017
- Loyola University Chicago** – One \$2,000 per year renewable tuition waiver Requirements: Admission to Loyola by April 1, 2017 ACT score 24+ or 30+ for the Honors Program Class rank in upper 10% Major in biology, chemistry, physics, pre-medicine, or mathematics
- Northeastern Illinois University** – Two ½-year, tuition-free scholarships Requirements: ACT score 25+; Honors College admission Class rank in upper 10% Must have a valid social security number
- University of Chicago** – One tuition waiver of \$2,000 Requirement: Accepted by the University by April 1, 2017
- University of Illinois at Chicago** – One 4-year, full tuition scholarship. Requirement: Admission to UIC Honors College by April 1, 2017. Call 312.413.2260 for details regarding acceptance into the Honors Program.

Your application for scholarships will be considered with those of other students. A committee will evaluate the credentials you have submitted. DECISIONS OF THE COMMITTEE ARE FINAL. Scholarships cannot be converted from one type to another. Scholarships are not transferable.

SYMPOSIUM PAPER / IJAS STATE ESSAY CHECKLIST

Please check each item as it is compiled to ensure the paper will be included and given consideration by the Symposium readers.

STUDENT SCIENCE SYMPOSIUM AND ESSAY ENTRY FORMS

- Typed** and properly completed form.
- Submitted four (4) copies of the *Official Entry Form for the Symposium and Essay Competition*, page 93, by Thursday, **January 12, 2017. This is a firm deadline. It will NOT be extended.** The information in this form **MUST** be typed.
- Attached copy of the *CPS Media Consent Form* on pages 97 - 98 of the current *Science Fair Handbook*.

SYMPOSIUM PAPER

- Completed the work as an individual student.
- Typed the paper with prescribed margins.
- Typed the title, student's name, and page number on each page. See page 29 – Paper Layout
- Limited the paper to a maximum of 30 pages (33 pages if Human, Vertebrate Animal, Vertebrate Animal Tissue, Microorganism, or Recombinant DNA Endorsement is required). **NO EXCEPTIONS.**
- Included (in this sequence): Abstract (in IJAS format); Safety Sheet; Vertebrate Animal, Human or Vertebrate Tissue, Microorganism, or Recombinant DNA Endorsement (if required); Title Page; Table of Contents; Acknowledgments; Purpose and Hypothesis; Review of Literature; Materials and Methods of Procedure; Results; Conclusions; and Reference List.
- Stapled pages securely in the upper left corner without cover or folder.
- Had each copy signed by the sponsoring teacher and school science fair coordinator.
- Submitted four (4) copies of the abstract, safety sheet, endorsement(s) and research paper by Thursday, January 12, 2017. **This is a firm deadline. It will NOT be extended.**
- E-mailed together as one (1) PDF file: the abstract, safety sheet, endorsement(s), and research paper by Thursday, January 12th, 2017. **This is a firm deadline. It will NOT be extended**

ESSAY

- Completed the work as an individual student.
- Type the paper, double-spaced, on one side only.
- Typed the title, page number, and author's last name on each page.
- Included (in this sequence): Essay Cover Page; Table of Contents; Introduction, Body, Conclusion or Summary, and Reference List.
- Limited the paper to 1200–1500 words.
- Stapled pages securely in the upper left corner without cover or folder.
- Had each copy signed by the sponsoring teacher and school science fair coordinator.
- Submitted four (4) copies by **Thursday, January 12, 2017. This is a firm deadline. It will NOT be extended.**

**CHICAGO PUBLIC SCHOOLS
MEDIA CONSENT FORM AND RELEASE**

School _____

Date _____

____ I hereby consent to have _____
(relation, full name, date of birth)

photographed, video taped, audio taped or interviewed by the Board of Education of the City of Chicago (the "Board") or the news media when school is in session or when my child is under the supervision of the Board. I understand in the course of the above described activities that the Board might like to celebrate my child's accomplishments and work. Therefore, I further consent for the Board's release of information on my child's name, academic/non-academic awards and information concerning my child's participation in school-sponsored activities, organizations and athletics..

I also consent to the Board's use of my child's name, photograph or likeness, voice or creative work(s) on the Internet or on a CD or any other electronic/digital media or print media.

As the child's parent or legal guardian, I agree to release and hold harmless the Board, its members, trustees, agents, officers, contractors, volunteers and employees from and against any and all claims, demands, actions, complaints, suits or other forms of liability that shall arise out of or by reason of, or be caused by the use of my child's name, photograph or likeness, voice or creative work(s), on television, radio or motion pictures, or in the print medium, or on the Internet or any other electronic/digital medium..

It is further understood and I do agree that no monies or other consideration in any form, including reimbursement for any expenses incurred by me or my child, will become due to me, my child, our heirs, agents, or assigns at any time because of my child's participation in any of the above activities or the above-described use of my child's name, photograph or likeness, voice or creative work(s).

I understand that I may cancel my consent by providing written notice to the principal. I understand that I may cancel my consent by providing written notice to the principal.

Signature of Parent or Guardian or Student if age 18 or over

____ I do not consent to my child being photographed, video taped, audio taped and/or interviewed by the Board or the news media when school is in session or when my child is under the supervision of the Board. I do not consent for the Board to use creative work(s) generated and/or authored by my child on television, radio or motion pictures, or in the print medium, or on the Internet or any other electronic/digital medium.

Signature of Parent or Guardian or Student if age 18 or over

**ESCUELAS PÚBLICAS DE CHICAGO
CONSENTIMIENTO DE PRENSA Y DISPENSA DE RESPONSABILIDAD**

Escuela _____

Fecha _____

____ **Por** la presente autorizo a que mi _____
(nombre completo y relación) (estudiante de la fecha de nacimiento)

sea fotografiado(a), grabado(a) en video, grabado(a) en audio y /o entrevistado(a) por la Junta de Educación de Chicago (la "Junta") o por medios de prensa en instalaciones escolares cuando la escuela esté funcionando o cuando el niño se encuentre bajo la supervisión de la Junta. Entiendo que en el curso de las actividades señaladas la Junta quiera celebrar los logros y el trabajo de mi hijo(a). Por lo tanto, también autorizo a la Junta la divulgación del nombre de mi hijo(a), de sus premios académicos y no académicos y de información relacionada con su participación en actividades auspiciadas por la escuela, organizaciones y deportes..

También autorizo a la Junta el uso de fotografías o retratos de mi hijo(a) o de su voz o trabajo creativo en Internet o en un CD educativo, o en cualquier otro medio electrónico/digital o impreso.

Como padre o tutor legal del niño(a), libero de toda responsabilidad a la Junta, a sus miembros, síndicos, agentes, oficiales, contratistas, voluntarios y empleados ante cualquiera y todos los reclamos, demandas, acciones, quejas, juicios u otras formas de responsabilidad que puedan surgir por cualquier razón, o puedan ser causadas por el uso del trabajo creativo, fotografía, retrato o voz en televisión, radio o películas, o en medios impresos, Internet o cualquier otro medio electrónico/digital.

Es entendido además y estoy de acuerdo en que no se me debe a mí, a mi hijo(a), a nuestros herederos, agentes o designados ningún dinero o consideración de ninguna especie, incluyendo el reembolso de cualquier gasto realizado por mí o por mi hijo(a) durante la participación en cualquiera de las actividades mencionadas, o por el uso de su trabajo creativo, fotografías, retrato o voz.

Entiendo que puedo cancelar este consentimiento mediante una comunicación por escrito al director escolar.

Firma del padre o tutor, o del estudiante si tiene 18 años o más

____ **no** autorizo que mi hijo(a) sea fotografiado(a), grabado(a) en video, grabado(a) en audio y /o entrevistado(a) por la Junta o por medios de prensa en instalaciones escolares cuando la escuela esté funcionando o cuando el niño se encuentre bajo la supervisión de la Junta. **No** autorizo que la Junta utilice el trabajo o trabajos creativos generados por o de autoría de mi hijo(a) en televisión, radio o películas, o en medios impresos, Internet o cualquier otro medio electrónico/digital

CHICAGOWSKIE SZKOŁY PUBLICZNE WYRAŻENIE ZGODY I ZEZWOLENIE NA PUBLIKACJĘ W MEDIACH

Escuela _____

Fecha _____

____ **Wyrażam zgodę** na fotografowanie, nagrywanie na taśmę wideo, nagranie głosu i / lub rozmowy wywiadu z _____

(pokrewieństwo oraz imię i nazwisko, data urodzenia)

przeprowadzone przez Zarząd Edukacji Miasta Chicago ("Rada") lub inne media informacyjne, na terenie szkoły w czasie zajęć lekcyjnych lub gdy moje dziecko jest pod nadzorem Zarządu Edukacji. Rozumiem, że w związku z powyższym Rada może wykorzystywać osiągnięcia i prace mojego dziecka. Wyrażam zgodę na publikację informacji na temat mojego dziecka, jego/jej imię, informacje o nagrodach w nauce i innych zajęciach, informacje dotyczące uczestnictwa mojego dziecka w sponsorowanych przez szkołę zajęciach, działalności w organizacjach i sporcie.

Wyrażam również zgodę, na wykorzystanie przez Radę imienia mojego dziecka, jego fotografii lub podobieństwa, głosu, albo prac twórczych w Internecie i edukacyjnych płytach kompaktowych, lub innych elektronicznych mediach cyfrowych lub drukowanych.

Jako rodzic lub prawny opiekun dziecka zgadzam się na publikację i zwalnim od odpowiedzialności Zarząd Edukacji Miasta Chicago, jego członków, powierników, agentów, oficerów, wykonawców, wolontariuszy i pracowników, z tytułu wszelkich roszczeń, działań, skarg, pozwów lub innych rodzajów odpowiedzialności, które mogą powstać w związku z, lub być spowodowane, przez użycie imienia mojego dziecka, twórczości – prac mojego dziecka, zdjęć, podobizny lub głosu w telewizji, radio lub filmie albo w postaci drukowanej lub w Internecie albo innych elektronicznych mediach cyfrowych.

Rozumiem ponadto i zgadzam się, że: ja, moje dziecko, nasi spadkobiercy czy przedstawiciele nie będą żądać żadnych form zapłaty pieniężnej lub korzyści w jakiegokolwiek formie, w tym zwrotu poniesionych przeze mnie lub moje dziecko kosztów, związanych z udziałem w powyższych czynnościach lub wyżej opisanym wykorzystaniu imienia, twórczości mojego dziecka, jego zdjęć, podobizny lub głosu.

Rozumiem, że mogę odwołać powyższe zezwolenie poprzez pisemną notę skierowaną do dyrektora szkoły.

Podpis rodzica lub opiekuna lub ucznia w wieku 18 lat lub więcej

____ **Nie wyrażam** zgody na fotografowanie, nagrywanie na taśmę wideo, nagranie głosu i / lub rozmowy/wywiadu z moim dzieckiem przeprowadzone przez Zarząd Edukacji Miasta Chicago ("Rada") lub inne media informacyjne, na terenie szkoły w czasie zajęć lekcyjnych lub gdy moje dziecko jest pod nadzorem Zarządu Edukacji. **Nie zgadzam się**, aby Rada wykorzystywała osiągnięcia i prace mojego dziecka w telewizji, radiu czy filmie, lub mediach drukowanych, albo w Internecie czy innych elektronicznych mediach cyfrowych .

Podpis rodzica lub opiekuna lub ucznia w wieku 18 lat lub więcej

Science Fair Calendar of Events: 2016-2017

SEPTEMBER

- 9/19 Board of Directors meeting
- 9/20 COMED HIGH SCHOOL SCIENCE CLUB applications to be received by Luba Johnson. Applications can be emailed to ljohnson131@cps.edu or faxed to 773-925-1136.
- 9/20 PEOPLES GAS MIDDLE SCHOOL SCIENCE CLUB applications to be received by Luba Johnson. Applications can be emailed to ljohnson131@cps.edu or faxed to 773-925-1136.
- 9/21 City Science Fair Council Meeting (Network Fair Chairpersons. & Operating Committee Chairpersons), Museum of Science & Industry, E-Suite, 4:00 pm – 6:30 pm.
- 9/24 Science Fair Central for students, parents & teachers at Chicago State University (CSU) – CSU will host Science Fair Central from 9 AM to 12:00 PM in the Science Building Rooms 106-108. or write Prof. Valerie Goss at vgoss@csu.edu
- 9/26 City Science Fair Council Meeting (Network Fair Chairpersons. & Operating Committee Chairpersons), Museum of Science & Industry, E-Suite, if needed.

OCTOBER

- 10/01 Science Fair Central for students, parents & teachers at Northeastern Illinois University (NEIU) - see <http://www.neiu.edu/~sfc/> or Dr. Huseyin Colak at h-colak@neiu.edu for details).
- 10/15 Projects conducted in a university, hospital or research facility under the supervision of a professor or scientist must submit endorsement documents prior to beginning their project. Appropriate endorsement form with supporting documents must be sent to the Scientific Review Committee member listed on the appropriate forms.
- 10/17 Board of Directors meeting.
- 10/31 REQUEST FOR USE OF FIREARMS ENDORSEMENT to be received by the safety review committee on the appropriate form with all documents attached.

NOVEMBER – DECEMBER

- 11/12 QED Math Symposium pre-registration. Registration forms accessible online at <http://www.mathcirclesofchicago.org/qed>
- 11/15 ENDORSEMENT REQUESTS DUE for human, vertebrate, human and vertebrate tissue, microbiology, and DNA to be received by the Scientific Review committee member listed on the appropriate form. Projects conducted under the supervision of a professor or scientist at a university, hospital or research facility must submit endorsements prior to beginning project – deadline is October 15, 2016.
- 11/17-12/16 Suggested dates for local school science fairs.
- 11/18 RESEARCH GRANT APPLICATIONS FOR PRE-APPROVAL DUE to Ms. Dubielak-Wood, at the Office of Teaching and Learning -Science, Bridgeport Office, GSR # 39
- 12/03 QED Math Symposium held at Walter Payton High School from 8:30 a.m. to 2:15 p.m. For more information contact Doug O'Roark at doug@mathcirclesofchicago.org
- 12/05 Board of Directors' Meeting
- 12/15 IJAS COVER DESIGNS DUE to IJAS Cover Design c/o CPS Student Science Fair, Inc., P.O. Box 803945, Chicago, IL 60680-3945

JANUARY – FEBRUARY 2017

- 1/12 SYMPOSIUM PAPERS & ESSAYS DUE. – Symposium and Essay Entry Forms, along with Research Papers and all required documents must be sent as one PDF file via email to cpssciencefair@gmail.com Attention – Jennifer Patush

- 1/12-2/03 Suggested dates for Regional Science Fairs
- 1/11 Operating Committee Chairpersons Meeting, Museum of Science & Industry, E-Suite, 4:00 p.m.
- 1/28 Symposium and essay paper reading. Contact Jennifer Patush at cpssciencefair@gmail.com
- 2/06 Board of Directors' Meeting
- 2/15 Operating Committee Chairpersons Meeting, Museum of Science & Industry, E-Suite, 4:00 p.m.
- 2/16 Notification of students selected to present high school research papers at the Science Fair Symposium
- 2/24 MINI & MAXI RESEARCH GRANT APPLICATIONS DUE DUE to Ms. Barbara Dubielak-Wood, at the Office of Teaching and Learning -Science, Bridgeport Office, GSR # 39

MARCH

- 3/06 Board of Directors Meeting
- 3/08 Operating Committee Chairpersons Meeting, Museum of Science & Industry, E-Suite, 4:00 p.m.
- 3/14 CPS 7th and 8th grade exhibitors set up projects at the Museum of Science and Industry, 9:30 a.m. – 1 p.m.
- 3/15 CPS HS exhibitors & symposium participants set up at the Museum of Science and Industry 9:30 a.m. – 1 p.m.
- 3/16 Science Fair Symposium Presentations, 9 a.m. – 3 p.m.
- 3/17 City Science Fair Exhibit Judging 8 a.m. – 1 p.m.
Opening Ceremony 11 a.m.
Fair open to the public at 1-3:15 p.m.
- 3/18 International Science and Engineering Fair Judging
Sixth-Grade Recognition Event (by invitation only)
Fair open to the public during regular museum hours.
- 3/29 Fair open to the public 11:00 to 12 Noon
Awards Program 1:00 – 3:00 p.m. (by invitation only)
- 3/23 OK CPS SSF SCHOLARSHIP APPLICATIONS DUE; all necessary documents to be received by Jenny Sarna, Scholarship Chairperson, CPS Bridgeport Office, Teaching & Learning – Science, GSR# 39

APRIL

- 4/19 Science Fair Scholarship Oral Interviews (by invitation only), location to be announced

MAY-JUNE

- 5/13-19 International Science and Engineering Fair, Los Angeles, CA
- 5/-5-06 Illinois Junior Academy of Science Exposition (IJAS State Science Fair); Northern Illinois University, DeKalb, Illinois
- 5/17 Board of Directors Meeting, 2:00 p.m.
- 5/17 Scholarship Awards Reception, by invitation only, location to be announced.
- 5/23 FINAL MINI AND MAXI RESEARCH GRANT reports to Ms Barbara Dubielak-Wood at the Office of Teaching and Learning -Science, Bridgeport Office, GSR # 39
- 5/31 City Science Fair Council Meeting (Network Fair Chairpersons & Operating Committee Chairpersons) @ MSI, E-Suite, 4:00 p.m. – 6:30 p.m.

◆	Each school is provided 3 professional development days that can be used flexibly over the course of the school year
▲	School clerks begin working on Wednesday, August 24, 2016

HOLIDAYS			
September 5	Labor Day	January 16	M. L. King Day
October 10	Columbus Day	February 20	President's Day
November 11	Veterans Day	May 29	Memorial Day
November 24, 25	Thanksgiving Holiday		

Please note: November 25, December 26 and January 2 are holidays for the district offices. November 23 is a non-attendance day for students and school-based staff.

- NOTES:**
- ▶ **SCHOOL CALENDAR**— School clerks begin on August 24, 2016. Teachers and Chicago Teacher's Union (CTU) – represented Paraprofessionals and School-Related Personnel (PSRPs) begin on August 29, 2016.
 - Other school-based employees begin between August 29, 2016 and September 6, 2016.
 - Students begin classes on Tuesday, September 6, 2016 and end on Tuesday, June 20, 2017. Both days are full days of school for students.
 - ▶ **QUARTERS**— Each quarter ends on the following day:
 - Q1 ends November 3, 2016 Q3 ends April 6, 2017
 - Q2 ends February 2, 2017 Q4 ends June 20, 2017
 - ▶ **PROGRESS REPORT DISTRIBUTION DAYS**— Schools will distribute progress reports on the following dates:
 - Q1 on October 7, 2016 Q3 on March 10, 2017
 - Q2 on January 9, 2017 Q4 on May 19, 2017
 - ▶ **PARENT-TEACHER CONFERENCE DAYS**— Parents are asked to pickup report cards and conference with teachers after the first and third quarters. Parent-Teacher conference days are non-attendance days for students. Elementary and high schools are expected to run a Parent-Teacher Conference Day:
 - Elementary High School
 - Q1 on Wednesday, November 9, 2016 Q1 on Thursday, November 10, 2016
 - Q3 on Wednesday, April 19, 2017 Q3 on Thursday, April 20, 2017
 - ▶ **REPORT CARD DISTRIBUTION DAYS**— Please note that report cards for the second and fourth quarters will be sent home:
 - Q2 on February 10, 2017 Q4 on June 20, 2017
 - ▶ **TEACHER INSTITUTE DAYS**— Teacher institute days are non-attendance days for students. These days are approved by the State Superintendent of Instruction for teacher professional development. Teacher institute days are principal-directed, except September 2, 2016, which is half-principal and half teacher-directed.
 - Days include: August 31, 2016; September 1, 2016; September 2, 2016 and June 21, 2017.
 - ▶ **SCHOOL IMPROVEMENT DAYS**— School Improvement Days are non-attendance days for students and are for teachers and staff to review student data, plan instruction, and engage in development aligned to school priorities. They are principal-directed except on February 3, 2017 which is half principal-directed and half teacher-directed, and on April 7, 2017, which is teacher-directed.
 - Days include: November 4, 2016; February 3, 2017; and April 7, 2017.
 - ▶ **PROFESSIONAL DEVELOPMENT FLEX DAYS**— Each school is provided 3 Professional Development Days to be used flexibly across the year: August 29, 2016, August 30, 2016 and June 22, 2017. Professional development days are principal directed.
 - ▶ **VACATIONS**—Schools are closed for the following breaks:
 - Winter vacation— Schools are closed from December 26, 2016 to January 6, 2017.
 - Spring vacation— Schools are closed from April 10, 2017 to April 14, 2017.
 - ▶ **GRADUATION DATES**— High school graduation ceremonies cannot be held prior to June 10, 2017. Elementary graduations ceremonies cannot be held prior to June 15, 2017.
 - ▶ **ANTICIPATED SUMMER PROGRAMS**— Anticipated Summer Programs include Summer Bridge, Bilingual Bridge, English Language Summer Support, Extended School Year, Summer Acceleration and High School Summer Credit Recovery.

Inspiring today's students to
become tomorrow's scientists.
